

Deterministic random process

A random process is called a deterministic random process, if all the future values can be predicted from past observations.

Example : Consider a random process $X(t) = A \cos(\omega t + \theta)$. This consists of a family of pure sine waves and it is completely specified in terms of the random variables A and θ . Hence, it is a deterministic random process.

Non-deterministic random process

A random process is called a non-deterministic random process, if future values of any sample function cannot be predicted from past observations.

Example : In the case of dissolving of sugar crystals in coffee, it consists of a family of functions that cannot be described in terms of finite number of parameters. The future sample function cannot be determined from the past sample functions and so it is a non-deterministic random process.

Optimization for Learning and Control Comprehensive resource providing a masters level introduction to optimization theory and algorithms for learning and control Optimization for Learning and Control describes how optimization is used in these domains giving a thorough introduction to both unsupervised learning supervised learning and reinforcement learning with an emphasis on optimization methods for large scale learning and control problems Several applications areas are also discussed including signal processing system identification optimal control and machine learning Today most of the material on the optimization aspects of deep learning that is accessible for students at a Masters level is focused on surface level computer programming deeper knowledge about the optimization methods and the trade offs that are behind these methods is not provided The objective of this book is to make this scattered knowledge currently mainly available in publications in academic journals accessible for Masters students in a coherent way The focus is on basic algorithmic principles and trade offs Optimization for Learning and Control covers sample topics such as Optimization theory and optimization methods covering classes of optimization problems like least squares problems quadratic problems conic optimization problems and rank optimization First order methods second order methods variable metric methods and methods for nonlinear least squares problems Stochastic optimization methods augmented Lagrangian methods interior point methods and conic optimization methods Dynamic programming for solving optimal control problems and its generalization to reinforcement learning How optimization theory is used to develop theory and tools of statistics and learning e g the maximum likelihood method expectation maximization k means clustering and support vector machines How calculus of variations is used in optimal control and for deriving the family of exponential distributions Optimization for Learning and Control is an ideal resource on the subject for scientists and engineers learning about which optimization methods are useful for learning and control problems the text will also appeal to industry professionals using machine learning for different practical applications

Study Material of Communication System (EC) Ebook for GATE & ESE (Theory & Questions) Umesh Dhande, 2025-07-01 It is our pleasure that we insist on presenting Communication System EC authored for Electronics Communication Engineering to all of the aspirants and career seekers The prime objective of this book is to respond to tremendous amount of ever growing demand for error free flawless and succinct but conceptually empowered solutions to subject Communication System This book serves to the best supplement the texts for Electronics Communication Engineering but shall be useful to a larger extent for Electrical Engineering and Instrumentation Engineering as well Simultaneously having its salient feature the book comprises Step by step solution to all questions Detailed explanation of all the questions Solutions are presented in simple and easily understandable language The authors do not sense any deficit in believing that this title will in many aspects be different from the similar titles within the search of student We would like to express our sincere appreciation to Mrs Sakshi Dhande Mam Co founder GATE ACADEMY Group for her constant support

and constructive suggestions and comments in reviewing the script In particular we wish to thank GATE ACADEMY expert team members for their hard work and consistency while designing the script The final manuscript has been prepared with utmost care However going a line that there is always room for improvement in anything done we would welcome and greatly appreciate the suggestions and corrections for further improvement
