

# Distributed System: Fundamentals and Principles

Distributed systems are a collection of independent computers that cooperate to perform a task. These systems are built to handle complex workloads and provide high availability and scalability.

by Flip Flop

## What is a Distributed System?

### Shared Resources

A distributed system allows multiple computers to access and share data and resources, such as databases, files, and applications.

### Communication

Components in a distributed system communicate with each other over a network, exchanging messages and data.

### Scalability

Distributed systems can easily scale horizontally by adding more nodes to handle increased workload.
