Environmental Principles Nicolas de Sadeleer, 2002 This book traces the evolution of environmental principles from their origins as vague political slogans reflecting fears about environmental hazards to their embodiment in enforceable laws Since the early 1970s environmental issues have taken on an ever increasing profile This has been due in part to a fundamental change in the type and scale of risk posed by industry Issues such as global warming GM food and mad cow disease typify the new kinds of risk potentially catastrophic consequences could ensue yet there is no scientific agreement over their precise causation duration and other concerns Environmental law

has always responded to risks posed by industrial society but the new generation of risks have required a new set of environmental principles emerging from a combination of public fears science ethics and established legal practice This book shows how three of the most important principles of modern environmental law grew out of this new age of ecological risk the polluter pays principle the preventive principle and the precautionary principle The author examines the legal force of these principles and in the process offers a novel theory of norm formation in environmental law by unearthing new grounds of legality The book will be of interest to all with an interest in environmental law and policy in the relationship between law and science and in the ways in which political and ethical values can become embodied in laws
