Teachers at Their Best Rich Waters, 2018-04-03 The purpose of this book is to change the conversation about teacher induction preparation and development and how we create effective teachers Our national discussion about how to create effective teachers needs to move away from how higher education can do a better job preparing our teachers and move toward how our local schools can do a better job inducting preparing and developing our teachers over a full career There are two interconnected and irrefutable reasons for this First school culture supersedes all rational strategies for teacher development and second teachers learn to teach in the schools where they work not in higher education or any of the alternative routes which the ineffectiveness of higher education teacher preparation have caused to emerge With the affirmation of these postulates this book clarifies that teachers are at their best when they are working together in collaborative cultures where teacher thinking and decision making lead schools in continuous improvement and change Elaborating on the importance of these best conditions for optimal teacher development this book will insist that it is the entirety of a school culture that produces effective teachers and schools with authentic learning communities produce the cultures that produce effective teachers

Becoming Socialized in Student Affairs Administration Ashley Tull, Joan B. Hirt, Sue Saunders, 2023-07-03 Effective socialization of new student affairs professionals is essential both for the individual success of these practitioners and for the work of a college or university that promotes student learning It enables new professionals to manage the important personal and professional transitions they experience throughout their careers engage in continuous professional development and achieve high levels of productivity It also counteracts the high attrition rate among new hires with all the attendant costs to the institution in terms of resources spent on recruiting hiring training supervising and developing staff talent The socialization process for new professionals includes formal and informal elements that influence both success and quality of work life This process is far more complex than a single orientation program organized by a unit or division Rather it is a comprehensive process where both the new professional and organization learn about and from each other in ways that influence working relationships and individual and organizational outcomes Part I of this book defines the concept explains its value and offers a model of socialization Part II examines the institutional context in which the socialization of new professionals occurs and describes how different institutional types influence the socialization

process It considers the changing characteristics of college students and how these impact the work of student affairs In addressing the extra institutional and professional contexts Part III considers the role that graduate education plays in preparing new professionals for work in student affairs and offers guidance to faculty and practitioners involved in graduate education about what they can do to introduce graduate students to professional life It addresses the importance of professional orientation activities the roles of supervision and mentorship as well as the impact of peers and institutions on the socialization process It concludes with a discussion of the role and importance of professional associations This book is intended for graduate program faculty for senior student affairs officers concerned about developing and retaining the new staff and for administrators and leaders in student affairs shaping the future of the profession For new professionals themselves it offers insights on the path to professionalization *Resources in Education*, 1998 Federation over the Web

Klaus P. Jantke, Aran Lunzer, Nicolas Spyrtatos, Yuzuru Tanaka, 2005-12-23 The lives of people all around the world especially in industrialized nations continue to be changed by the presence and growth of the Internet Its influence is felt at scales ranging from private lifestyles to national economies boosting the pace at which modern information and communication technologies influence personal choices along with business processes and scientific endeavors In addition to its billions of HTML pages the Web can now be seen as an open repository of computing resources These resources provide access to computational services as well as data repositories through a rapidly growing variety of Web applications and Web services However people's usage of all these resources barely scratches the surface of the possibilities that such richness should offer One simple reason is that given the variety of information available and the rate at which it is being extended it is difficult to keep up with the range of resources relevant to one's interests Another reason is that resources are offered in a bewildering variety of formats and styles so that many resources effectively stand in isolation This is reminiscent of the challenge of enterprise application integration familiar to every large organization be it in commerce academia or government The challenge arises because of the accumulation of information and communication systems over decades typically without the technical provision or political will to make them work together Thus the exchange of data among those systems is difficult and expensive and the potential synergistic effects of combining them are never realized
