**Mathematical Cosmology** Peter Theodore Landsberg, David A. Evans, 1979      **An Introduction to Mathematical Cosmology** Jamal N. Islam, 2002 An introductory textbook on mathematical cosmology for beginning graduate students

**Current Topics In Mathematical Cosmology - Proceedings Of The International Seminar** M Rainer, Hans-jurgen Schmidt, 1998-12-31 In this volume current topics from classical large scale models to quantum gravity effects in the mathematical formulation of physically motivated cosmological theories are discussed There are contributions dealing with topics such as the singularity theorem the cosmic no hair theorem and other results related to the big bang and the inflationary cosmological models Also discussed are non standard themes like field equations of order higher than 2 space times of dimension different from 4 relating also to current generalizations of string theory and some issues in quantum cosmology      *Calculating the Cosmos* Ian Stewart, 2016-10-25 A prize winning scientist uses mathematical modeling to explain the cosmos

*Mathematical Cosmology and Extragalactic Astronomy*, 1976-02-19 **Mathematical Cosmology and Extragalactic Astronomy**

**Modern Theoretical and Observational Cosmology** Manolis Plionis, Spiros Cotsakis, 2012-12-06 Proceedings of the second Hellenic Cosmology Meeting held in the National Observatory of Athens Penteli 19 20 April 2001      *Mathematical Aspects of Paradoxes in Cosmology* Michal Křížek, Lawrence Somer, 2023-07-05

This book provides a mathematical and numerical analysis of many problems which lead to paradoxes in contemporary cosmology in particular the existence of dark matter and dark energy It is shown that these hypothetical quantities arise from excessive extrapolations of simple mathematical models to the whole physical universe Written in a completely different style to most books on General Relativity and cosmology the important results take the form of mathematical theorems with precise assumptions and statements All theorems are followed by a corresponding proof or an exact reference to the proof Some nonstandard topics are also covered including violation of the causality principle in Newtonian mechanics a critical mathematical and numerical analysis of Mercury s perihelion shift inapplicability of Einstein s equations to the classical two body problem due to computational complexity non uniqueness of the notion of universe the topology of the universe various descriptions of a hypersphere regular tessellations of hyperbolic spaces local Hubble expansion of the universe neglected gravitational redshift in the detection of gravitational waves and the possible distribution of mass inside a black hole The book also dispels some myths appearing in the theory of relativity and in contemporary cosmology For example although the hidden assumption that Einstein s equations provide a good description of the evolution of the whole universe is considered to be obvious it is just a null hypothesis which has not been verified by any experiment and has only been postulated by excessive extrapolations of many orders of magnitude      **Mathematical and Quantum Aspects of Relativity and**

**Cosmology** Spiros Cotsakis, Gary W. Gibbons, 2008-01-11 This book is written in a pedagogical style intelligible for graduate students It reviews recent progress in black hole and wormhole theory and in mathematical cosmology within the framework

of Einstein's field equations and beyond including quantum effects This collection of essays written by leading scientists of long standing reputation should become an indispensable source for future research **Mathematical Cosmology** Peter Theodore Landsberg, 1977 *Universe in a glass of iced-water. Exploration in off-the-wall physics* Victor

Christianto, Florentin Smarandache, Robert Neil Boyd, 2023-09-01 Various exploration in astrophysics has revealed many breakthroughs nowadays not only with respect to James Webb Telescope but also recent findings related to water and ice deposits in the Moon surface Those new findings seem to bring us to new questions related to origin of Earth Moon and the entire Universe **Modern Mathematical Models of Time and their Applications to Physics and Cosmology** W.G.

Tift, W.J. Cocke, 2012-12-06 The nature of time has long puzzled physicists and philosophers Time potentially has very fundamental yet unknown properties In 1993 a new model of multi dimensional time was found to relate closely to properties of the cosmological redshift An international conference was subsequently convened in April 1996 to examine past current and new concepts of time as they relate to physics and cosmology These proceedings incorporate 34 reviews and contributed papers from the conference The major reviews include observational properties of the redshift alternative cosmologies critical problems in cosmology alternative viewpoints and problems in gravitation theory and particle physics and new approaches to mathematical models of time Professionals and students with an interest in cosmology and the structure of the universe will find that this book raises critical problems and explores challenging alternatives to classical viewpoints

MATHEMATICAL COSMOLOGY : AN INTROD. Peter T. Landsberg, David A. Evans, 1979 Economics and Semiotics Stratos Myrogiannis, Constantinos Repapis, 2025-06-30 Everything in our world can be interpreted as a sign This opens up the question How do we proceed from semantics to pragmatics from theory to practice and vice versa What is the nature of the relation between interpretation action and reality And what can we learn by viewing economics and the economy through this lens This volume gathers together a broad range of scholars in order to address issues relating to the intersection of economics and semiotic theory Using concepts from the fields of economics and semiotics the contributors to this volume revisit past and present theories and reinterpret models of thought and expression to show that our preconceptions about the economy can be fruitfully challenged and gain depth through a semiotic lens The application of the semiotics approach to economics discourse is vital in helping us to examine topics that range from theory and economic history to the development of key economic ideas and concepts The volume aims to enhance our understanding of how economic agents act and our conceptualization of the economy and its cultural products can be reimagined This volume will be of great interest to economists literary scholars and students in the humanities **General Relativity And Gravitation: Proceedings Of The**

**14th International Conference** Mauro Francaviglia, Giorgio Longhi, Luca Lusanna, Emanuele Sorace, 1997-04-01 This volume covers topics ranging from the early universe cosmology inflation quantum gravity exact solutions and computer aided computations to space and terrestrial gravity experiments with special emphasis on recent research *Aristotle and*

*Mathematics* John J. Cleary, 1995 This book examines Aristotle's critical reaction to the mathematical cosmology of Plato's Academy and traces the aporetic method by which he developed his own cosmological and metaphysical views which underpin his philosophy of mathematics

**Music and Mathematics** John Fauvel, Raymond Flood, Robin J. Wilson, 2006 From ancient Greek times music has been seen as a mathematical art and the relationship between mathematics and music has fascinated generations This work links these two subjects in a manner that is suitable for students of both subjects as well as the general reader with an interest in music

**An Introduction to Mathematical Cosmology** Ronald Howland, 2018-01-10 This book is suitable as a textbook for advanced undergraduates and beginning graduate students It will also be of interest to cosmologists astrophysicists applied mathematicians and mathematical physicists The book begins with a brief overview of observational and theoretical cosmology along with a short introduction of general relativity It then goes on to discuss Friedmann models the Hubble constant and deceleration parameter singularities the early universe inflation quantum cosmology and the distant future of the universe

Library of Congress Subject Headings Library of Congress, Library of Congress. Subject Cataloging Division, 1975

**Cosmological Crossroads** Spiros Cotsakis, Eleftherios Papantonopoulos, 2002-11-07 This book has grown out of lectures held at a summer school on cosmology in response to an ever increasing need for an advanced textbook that addresses the needs of both postgraduate students and nonspecialist researchers from various disciplines ranging from mathematical physics to observational astrophysics Bridging the gap between standard textbook material in cosmology and the forefront of research this book also constitutes a modern source of reference for the experienced researcher in classical and quantum cosmology

*An Introduction to Mathematical Cosmology* J. N. Islam, 2001-11-22 This book provides a concise introduction to the mathematical aspects of the origin structure and evolution of the universe The book begins with a brief overview of observational and theoretical cosmology along with a short introduction of general relativity It then goes on to discuss Friedmann models the Hubble constant and deceleration parameter singularities the early universe inflation quantum cosmology and the distant future of the universe This new edition contains a rigorous derivation of the Robertson Walker metric It also discusses the limits to the parameter space through various theoretical and observational constraints and presents a new inflationary solution for a sixth degree potential This book is suitable as a textbook for advanced undergraduates and beginning graduate students It will also be of interest to cosmologists astrophysicists applied mathematicians and mathematical physicists
