Discretization Methods and Structural Optimization — Procedures and Applications Hans A. Eschenauer,Georg Thierauf,1989-03-23 The main subject of this GAMM Seminar is research in the field of discretization methods and structural optimization The topics are procedures strategies and algorithms for structural optimization based on modern discretization techniques In particular sensitivity and mesh generation large scale structural systems and decomposition for finite element systems are covered Structural optimization is presented as multipurpose and multistage optimization Optimal design and shape optimization are treated in analytical form and as an interactive process Finally knowledge based algorithms for design optimization and expert systems are discussed Second International Conference on Computation in Electromagnetics,

Galerkin Ritz Courant and Hilbert 1 4 to mention the most important However the method could not be applied in a practical way since it involved the solution of a large number of linear or non linear algebraic equations Today it is quite common with the aid of computers to solve non linear algebraic problems of several thousand equations The necessary numerical methods and programming techniques are now an integral part of the teaching curriculum in most engineering schools Mechanical engineers confronted with very complicated structural problems were the first to take advantage of advanced computational methods and high level languages FORTRAN to transform the mechanical models into algebraic equations 1956 In recent times 1960 the FEM has been studied by applied mathematicians and having received rigorous treatment has become a part of the more general study of partial differential equations gradually replacing the finite difference method which had been considered the universal tool to solve these types of problems **Engineering Index Annual** ,1930 Chartered Mechanical Engineer ,1986
