Mathematical Methods For Oceanographers An Introduction:

Mathematical Methods for Oceanographers Edward A. Laws, 1997-03-05 Oceanography calls for a wide variety of mathematical and statistical techniques and this accessible treatment provides the basics every oceanographer needs to know including Practical ways to deal with chemical geological and biological oceanographic data Instructions on detecting the existence of patterns in what appears to be noise Numerous examples from the field that highlight the application of the methods presented Written by an oceanographer and based on his successful course at the University of Hawaii the volume is well suited to a two semester course at the graduate level The book reviews the necessary calculus clarifies statistical concepts and includes end of chapter problems that illustrate and expand the various topics Tips on using MATLAB software in matrix operations complement chapters that deal with the formulation of relationships in terms of matrices The main body of the text covers the actual methods of dealing with data including least squares and linear regression correlation functions and analysis of variance means and error bounds nonlinear techniques and weighted least squares numerical integration and other modeling techniques Unlike most introductory texts Mathematical Methods for Oceanographers discusses regression methods in great detail and includes an analysis of why certain methods produce unbiased parameter estimates Finally the chapter on time series analysis covers an area of particular interest to physical oceanographers The numerous problems and solutions included in the book enable readers to check their understanding of concepts and techniques as well as their ability to apply what they have learned A must read for students of oceanography this text reference is also useful for professionals in the field as well as for fisheries scientists biologists and those in the environmental sciences A systematic introduction to the mathematics oceanographers need Topics covered in Mathematical Methods for Oceanographers include A review of the necessary calculus Model I linear regression Correlation analysis Model II linear regression Polynomial curve fitting linear multiple regression analysis and nonlinear least squares Numerical integration Box models Time series analysis
