(English Translation by C. Irvine and M. Bardach.) [With Illustrations and Cards.]* Hugo STEINHAUS, M. BARDACH, Charles Irvine, 1938 **The Mathematical Tourist** Ivars Peterson, 1998-04-15 In the first edition of The Mathematical Tourist renowned science journalist Ivars Peterson took readers on an unforgettable tour through the sometimes bizarre but always fascinating landscape of modern mathematics Now the journey continues in a new updated edition that includes all the latest information on mathematical proofs fractals prime numbers and chaos as well as new material on the relationship between mathematical knots and DNA how computers based on quantum logic can significantly speed up the factoring of large composite numbers the relationship between four dimensional geometry and physical theories of the nature of matter the application of cellular automata models to social questions and the peregrinations of virtual ants a novel mathematical model of quasicrystals based on decagon shaped tiles Blazing a trail through rows of austere symbols and dense lines of formulae Peterson explores the central ideas behind the work of professional mathematicians how and where their pieces of the mathematical puzzle fit in the sources of their ideas their fountains of inspiration and the images that carry them from one discovery to another **Mathematical Snapshots** Hugo Steinhaus, 1960 **One Hundred Problems in Elementary Mathematics** Hugo Steinhaus, 2016-04-10 Both a challenge to mathematically inclined readers and a useful supplementary text for high school and college courses One Hundred Problems in Elementary Mathematics presents an instructive stimulating collection of problems Many problems address such matters as numbers equations inequalities points polygons circles ellipses space polyhedra and spheres An equal number deal with more amusing or more practical subjects such as a picnic ham blood groups rooks on a chessboard

and the doings of the ingenious Dr Abracadabrus Are the problems in this book really elementary Perhaps not in the lay reader s sense for anyone who desires to solve these problems must know a fair amount of mathematics up to calculus Nevertheless Professor Steinhaus has given complete detailed solutions to every one of his 100 problems and anyone who works through the solutions will painlessly learn an astonishing amount of mathematics A final chapter provides a true test for the most proficient readers 13 additional unsolved problems including some for which the author himself does not know the solutions
