**Architecture and Mathematics from Antiquity to the Future** Kim Williams, Michael J. Ostwald, 2015-02-11 Every age and every culture has relied on the incorporation of mathematics in their works of architecture to imbue the built environment with meaning and order. Mathematics is also central to the production of architecture to its methods of measurement, fabrication and analysis. This two volume edited collection presents a detailed portrait of the ways in which two seemingly different disciplines are interconnected. Over almost 100 chapters it illustrates and examines the relationship between architecture and mathematics. Contributors of these chapters come from a wide range of disciplines and backgrounds: architects, mathematicians, historians, theoreticians, scientists and educators. Through this work architecture may be seen and understood in a new light by professionals as well as non professionals. Volume II covers architecture from the Late Renaissance era through Baroque, Ottoman, Enlightenment, Modern and contemporary styles and approaches. Key figures covered in this volume include Palladio, Michelangelo, Borromini, Sinan, Wren, Wright, Le Corbusier, Breuer, Niemeyer and Kahn. Mathematical themes which are considered include linear algebra, tiling and fractals and the geographic span of the volume's content includes works in the United States of America and Australia in addition to those in Europe and Asia. **The**

**Architecture of Modern Mathematics** José Ferreirós Domínguez, Jeremy Gray, 2006-04-27 Aimed at both students and researchers in philosophy, mathematics and the history of science, this edited volume authored by leading scholars highlights foremost developments in both the philosophy and history of modern mathematics. *Formal Methods in Architecture* Plácido Lizancos Mora, David Leite Viana, Franklim Morais, Jorge Vieira Vaz, 2023-09-02 This book comprises the select proceedings of the 6th International Symposium on Formal Methods in Architecture (6FMA) at Coruña 2022. The contents focus on the use of methodologies, especially those that have witnessed recent developments stemming from mathematical and computer sciences and are developed in a collaborative way with architecture and related fields. This book constitutes a contribution to the debate and to the introduction of new methodologies and tools in the mentioned fields that derive from the application of formal methods in the creation of new explicit languages for problem solving in architecture and urbanism. Some of the themes in the book are CAD and BIM, mixed realities, photogrammetry and 3D scan architectural design, automation, urban and building performance analysis, SCAVA, space configuration, accessibility and visibility analysis. This book proves a valuable resource for those in academia and industry. **Architecture and Mathematics in Ancient Egypt**

Corinna Rossi, 2004-04-15 In this fascinating study, architect and Egyptologist Corinna Rossi analyses the relationship between mathematics and architecture in ancient Egypt by exploring the use of numbers and geometrical figures in ancient architectural projects and buildings. While previous architectural studies have searched for abstract universal rules to explain the history of Egyptian architecture, Rossi attempts to reconcile the different approaches of archaeologists, architects and historians of mathematics into a single coherent picture. Using a study of a specific group of monuments, the pyramids and

placing them in the context of their cultural and historical background Rossi argues that theory and practice of construction must be considered as a continuum not as two separated fields in order to allow the original planning process of a building to re emerge Highly illustrated with plans diagrams and figures this book is essential reading for all scholars of Ancient Egypt and the architecture of ancient cultures **The Mathematics of the Modernist Villa** Michael J. Dawes, 2018-04-12 This book presents the first detailed mathematical analysis of the social cognitive and experiential properties of Modernist domestic architecture The Modern Movement in architecture which came to prominence during the first half of the twentieth century may have been famous for its functional forms and machine made aesthetic but it also sought to challenge the way people inhabit understand and experience space Ludwig Mies van der Rohe s buildings were not only minimalist and transparent they were designed to subvert traditional social hierarchies Frank Lloyd Wright s organic Modernism not only attempted to negotiate a more responsive relationship between nature and architecture but also shape the way people experience space Richard Neutra s Californian Modernism is traditionally celebrated for its sleek geometric forms but his intention was to use design to support a heightened understanding of context Glenn Murcutt s pristine pavilions seemingly the epitome of regional Modernism actually raise important questions about the socio spatial structure of architecture Rather than focussing on form or style in Modernism this book examines the spatial social and experiential properties of thirty seven designs by Wright Mies Neutra and Murcutt The computational and mathematical methods used for this purpose are drawn from space syntax isovist geometry and graph theory The specific issues that are examined include the sensory and emotional appeal of space and form shifting social and spatial structures in architectural planning wayfinding and visual understanding and the relationship between form and program [Parametric Geometry of Curves and Surfaces](#) Alberto Lastra, 2021-09-06 This textbook provides a thorough introduction to the differential geometry of

parametrized curves and surfaces along with a wealth of applications to specific architectural elements Geometric elements in architecture respond to practical physical and aesthetic needs Proper understanding of the mathematics underlying the geometry provides control over the construction This book relates the classical mathematical theory of parametrized curves and surfaces to multiple applications in architecture The presentation is mathematically complete with numerous figures and animations illustrating the theory and special attention is given to some of the recent trends in the field Solved exercises are provided to see the theory in practice Intended as a textbook for lecture courses Parametric Geometry of Curves and Surfaces is suitable for mathematically inclined students in engineering architecture and related fields and can also serve as a textbook for traditional differential geometry courses to mathematics students Researchers interested in the mathematics of architecture or computer aided design will also value its combination of precise mathematics and architectural examples

**Formulations** Andrew Witt, 2022-01-11 An investigation of mathematics as it was drawn encoded imagined and interpreted by architects on the eve of digitization in the mid twentieth century In Formulations Andrew Witt examines the

visual methodological and cultural intersections between architecture and mathematics The linkages Witt explores involve not the mystic transcendence of numbers invoked throughout architectural history but rather architecture's encounters with a range of calculational systems techniques that architects inventively retooled for design Witt offers a catalog of mid twentieth century practices of mathematical drawing and calculation in design that preceded and anticipated digitization as well as an account of the formal compendia that became a cultural currency shared between modern mathematicians and modern architects Witt presents a series of extensively illustrated biographies of method episodes that chart the myriad ways in which mathematics particularly the mathematical notion of modeling and drawing was spliced into the creative practice of design These include early drawing machines that mechanized curvature the incorporation of geometric maquettes theorems made flesh into the toolbox of design the virtualization of buildings and landscapes through surveyed triangulation and photogrammetry formal and functional topology stereoscopic drawing the economic implications of cubic matrices and a strange synthesis of the technological mineral and biological crystallographic design Trained in both architecture and mathematics Witt uses mathematics as a lens through which to understand the relationship between architecture and a much broader set of sciences and visual techniques Through an intercultural exchange with other disciplines he argues architecture adapted not only the shapes and surfaces of mathematics but also its values and epistemic ideals **Nexus**
