PREFACE The Third International Mathematics and Science Study TIMSS sponsored by the International Association for the Evaluation of Educational Achievement IEA and the governments of the participating countries is a comparative study of education in mathematics and the sciences conducted in approximately 50 educational systems on five continents The goal of TIMSS is to measure student achievement in mathematics and science in participating countries and to assess some of the curricular and classroom factors that influence student learning in these subjects The study will provide educators and policy makers with an unparalleled and multidimensional perspective on mathematics and science curricula their implementation the nature of student performance in mathematics and science and the social economic and educational context in which these occur TIMSS focuses on student learning and achievement in mathematics and science at three different age levels or populations Population 1 is defined as all students enrolled in the two adjacent grades that contain the largest proportion of 9 year old students Population 2 is defined as all students enrolled in the two adjacent grades that contain the largest proportion of 13 year old students and Population 3 is defined as all students in their final year of secondary education including students in vocational education programs In addition Population 3 has two specialist subpopulations students taking advanced courses in mathematics mathematics specialists and students taking advanced courses in physics science specialists [Mathematics Teacher Resource Handbook](#), 1993 *The Math Book* Clifford A. Pickover, 2009 This book covers 250 milestones in mathematical history beginning millions of years ago with ancient odometers and moving through time to our modern day quest for new dimensions **The Mathematical Gazette**, 1986 **Today's Education**, 1982 **Mathematical Reviews**, 1990 **Foundations of Hyperbolic Manifolds** John Ratcliffe, 2013-03-09 This book is an exposition of the theoretical foundations of hyperbolic manifolds It is intended to be used both as a textbook and as a reference Particular emphasis has been placed on readability and completeness of argument The treatment of the material is for the most part elementary and self contained The reader is assumed to have a basic knowledge of algebra and topology at the first year graduate level of an American university The book is divided into three parts The first part consisting of Chapters 1-7 is concerned with hyperbolic geometry and basic properties of discrete groups of isometries of hyperbolic space The main results are the existence theorem for discrete reflection groups the Bieberbach theorems and Selberg's lemma The second part consisting of Chapters 8-12 is devoted to the theory of hyperbolic manifolds The main results are Mostow's rigidity theorem and the determination of the structure of geometrically finite hyperbolic manifolds The third part consisting of Chapter 13 integrates the first two parts in a development of the theory of hyperbolic orbifolds The main results are the construction of the universal orbifold covering space and Poincaré's fundamental polyhedron theorem **El-Hi Textbooks**
