## Meditation

Meditation is a mind and body practice that has a long history of use for increasing calmness and physical relaxation, improving psychological balance, coping with illness, and enhancing overall health and well-being. There are many types of meditation, but most have four elements in common: a quiet location with as few distractions as possible; a specific, comfortable posture (sitting, lying down, walking, or in other positions); a focus of attention (a specially chosen word or set of words, an object, or the sensations of the breath); and an open attitude (letting distractions come and go naturally without judging them).

Although there is little recorded history on meditation, its roots go back to ancient times. Teacher and practitioner Mary Rogers explains: "Researchers speculate that primitive hunter-gatherer societies may have discovered meditation and its altered states of consciousness while gazing at the flames of their fires. Then, over thousands of years, meditation evolved into a structured practice." It seems meditation was first popular in the East with Indian scriptures known as "tantras" mentioning meditation techniques five thousand years ago. Meditation took thousands of years to spread to Western societies and it was not until the twentieth century when it finally started to gain popularity in the West. Historian David Luttlery describes how this happened: "Meditation spread to the West initially due to an increase in the popularity of Buddhism. Meditation being a central part of this religion meant that as Buddhism spread, other countries and cultures soon adopted many different forms of meditation."

Supporters of meditation claim that it can be a part of people's lives in different ways and is often practiced to acquire balance in people's physical, emotional, and mental states. Oliver Sachs, an Australian businessman, is an ardent fan. "I find that the deep rest that meditation gives me enables me to make better choices. I can work better all through the day and I sleep better at night." Meditation has also been used to help people quit smoking and conquer drug and alcohol addictions. Doctor Kristina Smith has researched meditation and found that there are definite biological and psychological benefits. "Proficient meditative practices help to integrate the brain functions and regulate various physiological mechanisms resulting in a state of mental and physical well-being."

One of the most important claimed benefits of meditation is how it releases stress from people's bodies. Psychologist Angela Matthews is an expert in this field and has theorised that there is a connection to mankind's development over time due to evolution. "When people's bodies are exposed to a sudden threat, they respond with the characteristic fight or flight reaction that is known as an adrenaline rush. If people are in extreme danger, these reactions are of great assistance and gain to them. The same response is now triggered in our daily lives when people are in a traffic hold-up or someone irritates us at work. If people do not confront things (and some things are beyond their control), they end up being in a permanent state of stress."
