### Emotional Roller Coaster

 Luna looked up. The roller coaster loomed like a mountain. A yellow and red mountain she would be racing down. "I'm not going," Luna told her brother. Paul turned to her. "Of course you're going. We already have our tickets. Come on—it'll be fun!"

 The kids moved forward in the line. Luna gripped her hands to stop them from shaking. Then it was their turn. Paul pulled her toward their seats. The bar came down and they were locked in. There was no getting out as the ride slowly climbed up the hill.

 "Ready?" asked Paul. Before Luna could answer, they were rushing down, down, down. The track looped and they raced up and around and then to a stop. "That was really scary!" said Paul. But Luna didn't listen. "Come on," she said. "Let's go again!"

Associations

between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives Sarit Ashkenazi, Orly Rubinsten, Bert De Smedt, 2017-10-05

Converging evidence demonstrates a strong link between reading and mathematics. Multiple cognitive processes are shared between reading and mathematics, including the representation and retrieval of symbolic information, attention, working memory, and cognitive control. Additionally, multiple brain networks are involved in both math and reading, and last common genetic factors might influence both reading and math. Hence, it comes as no surprise that there are meaningful associations between aspects of math and reading abilities. Moreover, comorbidity rates between math learning disabilities (MD) and reading disabilities (RD) are high, up to 66%, and the prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities. Accordingly, the goal of the research topic is to explore the underlying mechanisms of this overlap between reading and math. The research topic aims to include the following topics:

**Genetics:** It has been found that both RD and MD are based on genetic factors and run in families. Moreover, math problem solving shares significant genetic overlap with general cognitive ability and reading decoding, whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability. Hence, this topic will explore the shared and unique genetic risk factors to RD and MD. In addition to shared and unique genetic influence on reading and math.

**Neural perspective:** Converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus (IPS) as a core region that involves in quantity manipulation. However, several additional brain areas, such as frontoparietal and temporoparietal areas, were found to be involved in numerical tasks. Individuals with MD show deficits in a distributed set of brain regions that include the IPS, fusiform gyrus in posterior brain regions, and prefrontal cortex regions. Similarly, converging evidence indicates that the left hemisphere regions centered in the fusiform gyrus, temporoparietal cortex, and prefrontal cortex regions are strongly involved in typical reading and present lower activity, connectivity, or abnormal structure in RD. Thus, there is a meaningful neural overlap between reading and math. Hence, the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading: commonality and diversity both in the typical and atypical development.

**Cognitive factors:** Factors that play a role in mathematics and reading and comorbidity between RD and MD. There is a long-lasting debate whether MD and RD originate from unique cognitive mechanisms or not. Multiple cognitive processes are shared between reading and mathematics. Therefore, impairments in any one of domain-general skills could conceivably play an important role in both pure and comorbid conditions. Moreover, it has been suggested that phonological processing has a significant role in some aspects of numerical processing, such as retrieval of arithmetical facts.

**Education:** It will be interesting to look at the effect of interventions that aim to improve reading, such as phonological awareness, and their transfer effect on improving mathematical processing. Alternatively, it will be good to test whether math interventions will improve reading.
