**Return To Mathematical Circles:**

**Mathematical Circles: Volume 3, Mathematical Circles Adieu, Return to Mathematical Circles** Howard W. Eves,2004-06-24 For many years famed mathematics historian and master teacher Howard Eves collected stories and anecdotes about mathematics and mathematicians gathering them together in six Mathematical Circles books Thousands of teachers of mathematics have read these stories and anecdotes for their own enjoyment and used them in the classroom to add entertainment to introduce a human element to inspire the student and to forge some links of cultural history All six of the Mathematical Circles books have been reissued as a three volume edition This three volume set is a must for all who enjoy the mathematical enterprise especially those who appreciate the human and cultural aspects of mathematics

Return to Mathematical Circles Howard Eves,1988 **Mathematical Circles** Howard Eves,2003 Mathematical Circles: Mathematical circles adieu & Return to mathematical circles Howard Eves,2003 A Historian Looks Back Judith V. Grabiner,2010-10-14 Judith Grabiner has written extensively on the history of mathematics principally for mathematicians rather than historians This collection of her work highlights the benefits of studying the development of mathematical ideas and the relationship between culture and mathematics She also considers the struggles and successes of famous mathematicians with the aim of inspiring students and teachers alike A large part of this book is the author s The Calculus as Algebra J L Lagrange 1736 1813 which focuses on Lagrange s pioneering attempt to reduce the calculus to algebra The nine other articles are on a broad range of other topics such as some widely held myths about the history of mathematics and the work of heavyweight mathematicians such as Descartes Newton Maclaurin and Lagrange Six of these articles have won awards from the MAA for expository excellence This collection is an inspiring resource for history of mathematics courses

**Expeditions in Mathematics** Tatiana Shubin,David F. Hayes,Gerald L. Alexanderson,2011 This book is the second volume based on lectures for pre college students given by prominent mathematicians in the Bay Area Mathematical Adventures BAMA This book reflects the flavor of the BAMA lectures and the excitement they have generated among the high school and middle school students in the Silicon Valley The topics cover a wide range of mathematical subjects each treated by a leading proponent of the subject at levels designed to challenge and attract students whose mathematical interests are just beginning In addition the treatments given here will intrigue and enchant a more mature mathematician It is hoped that the publication of these lectures will expose students outside of the San Francisco Bay Area to interesting mathematical topics and treatments outside of their normal experience in the classroom Mathematical educators are encouraged to offer the students in their own localities similar opportunities to come into contact with exciting adventures in mathematics

Proof and Other Dilemmas Bonnie Gold,Roger A. Simons,2008 During the first 75 years of the twentieth century almost all work in the philosophy of mathematics concerned foundational questions In the last quarter of the century philosophers of mathematics began to return to basic questions concerning the philosophy of mathematics such as what is the nature of

mathematical knowledge and of mathematical objects and how is mathematics related to science Two new schools of philosophy of mathematics social constructivism and structuralism were added to the four traditional views formalism intuitionalism logicism and platonism The advent of the computer led to proofs and the development of mathematics assisted by computer and to questions of the role of the computer in mathematics This book of 16 essays all written specifically for this volume is the first to explore this range of new developments in a language accessible to mathematicians Approximately half the essays were written by mathematicians and consider questions that philosophers are not yet discussing The other half written by philsophers of mathematics summarize the discussion in that community during the last 35 years In each case a connection is made to issues relevant to the teach of mathematics     Beautiful Mathematics Martin Erickson,2011-12-22 Mathematical ideas have an aesthetic appeal that can be appreciated by anyone who has the time and dedication to investigate Mathematical topics are presented in the categories of words images formulas theorems proofs solutions and unsolved problems Readers will discover exciting mathematics topics from complex numbers to arithmetic progressions from Alcuin s sequence to the zeta function and from hypercubes to infinity squared Who should read this book There is something new for any mathematically minded person High school and college students will find motivation for their mathematical studies Professional mathematicians will find fresh examples of mathematical beauty to pass along to others Within each chapter the topics require progressively more prerequisite knowledge An appendix gives background definitions and theorems while another gives challenging exercises with solutions     Lobachevski Illuminated Seth Braver,2011 A historical introduction to non Euclidean geometry     The Edge of the Universe Deanna Haunsperger,Stephen Kennedy,2006 Beautifully printed with 24 pages of full color Ideal for Math Clubs Math Horizons is a magazine that celebrates the people and ideas which are mathematics Containing the editor s selections from the first ten years of the magazine s existence this volume features exquisite expositions of undergraduate level mathematics Broad and appealing the coverage also includes fiction with mathematical themes literary theatrical and cinematic criticism humor history and social history Mathematics is shown as a human endeavor through biographies and interviews of mathematicians and users of mathematics including artists writers and scientists The puzzles games and activities throughout make it a valuable resource for student math clubs Though especially appealing to students of mathematics from high school to graduate school and their teachers this collection is an eclectic and wide ranging look at the culture of mathematics and offers enjoyable reading for anyone with an interest in mathematics     The Magic Numbers of the Professor Owen O'Shea,Underwood Dudley,2007-03-08 A fascinating collection of numerical curiosities and wonders The Professor in Owen O Shea s book is the imaginary American Richard Stein As Owen O Shea and the Professor travel through Ireland O Shea notes the Professor s collection of amazing magic numbers in fascinating detail His mathematical curiosities are wide ranging concerning the 1915 sinking of the Lusitania to coincidences about Apollo 11 to the first moon walk to new numerical curiosities The new curiosities among many others

center on Presidents Lincoln and Kennedy the USA and Ireland the two World Wars the King James Version of the Bible and James Joyce The Magic Numbers of the Professor reveals astonishing details about the year 1776 the year of American Independence It contains discussions on prime numbers gives some wonderful number patterns and reveals many other eye opening properties of numbers It asks for instance if you know in how many different ways a US dollar can be changed The Professor gives the answer to this and other currency questions The number of the Beast 666 is discussed as well as are many new equations involving that famous number all appearing here for the first time And for those fascinated by games and gambling a number of curious proposition bets involving dice darts and playing cards and various mathematical puzzles are scattered throughout this singularly entertaining book **Six Sources of Collapse** Charles R. Hadlock,2012 An accessible investigation into the mathematics behind collapse processes ranging from crashing financial markets to extreme weather to ecological disasters **A Decade of the Berkeley Math Circle** Zvezdelina Stankova,Tom Rike,2008-11-26 Many mathematicians have been drawn to mathematics through their experience with math circles extracurricular programs exposing teenage students to advanced mathematical topics and a myriad of problem solving techniques and inspiring in them a lifelong love for mathematics Founded in 1998 the Berkeley Math Circle BMC is a pioneering model of a U S math circle aspiring to prepare our best young minds for their future roles as mathematics leaders Over the last decade 50 instructors from university professors to high school teachers to business tycoons have shared their passion for mathematics by delivering more than 320 BMC sessions full of mathematical challenges and wonders Based on a dozen of these sessions this book encompasses a wide variety of enticing mathematical topics from inversion in the plane to circle geometry from combinatorics to Rubik s cube and abstract algebra from number theory to mass point theory from complex numbers to game theory via invariants and monovariants The treatments of these subjects encompass every significant method of proof and emphasize ways of thinking and reasoning via 100 problem solving techniques Also featured are 300 problems ranging from beginner to intermediate level with occasional peaks of advanced problems and even some open questions The book presents possible paths to studying mathematics and inevitably falling in love with it via teaching two important skills thinking creatively while still obeying the rules and making connections between problems ideas and theories The book encourages you to apply the newly acquired knowledge to problems and guides you along the way but rarely gives you ready answers Learning from our own mistakes often occurs through discussions of non proofs and common problem solving pitfalls The reader has to commit to mastering the new theories and techniques by getting your hands dirty with the problems going back and reviewing necessary problem solving techniques and theory and persistently moving forward in the book The mathematical world is huge you ll never know everything but you ll learn where to find things how to connect and use them The rewards will be substantial In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles

Library series as a service to young people their parents and teachers and the mathematics profession **Mathematics in Historical Context** Jeff Suzuki,2009-08-27 An exploration of the interaction between mathematics mathematicians and society What would Newton see if he looked out his window Mathematical Circles Squared Phillip E. Johnson,1972 Here is a third trip around the mathematical circle Except for the first quadrant and the tail end of the fourth quadrant the items in this third set of stories are classified by geography The first quadrant features a couple of dozen examples dealing with mathematically motivated design **A Decade of the Berkeley Math Circle** Zvezdelina Stankova, Tom Rike,2015-02-03 Many mathematicians have been drawn to mathematics through their experience with math circles The Berkeley Math Circle BMC started in 1998 as one of the very first math circles in the U S Over the last decade and a half 100 instructors university professors business tycoons high school teachers and more have shared their passion for mathematics by delivering over 800 BMC sessions on the UC Berkeley campus every week during the school year This second volume of the book series is based on a dozen of these sessions encompassing a variety of enticing and stimulating mathematical topics some new and some continuing from Volume I from dismantling Rubik s Cube and randomly putting it back together to solving it with the power of group theory from raising knot eating machines and letting Alexander the Great cut the Gordian Knot to breaking through knot theory via the Jones polynomial from entering a seemingly hopeless infinite raffle to becoming friendly with multiplicative functions in the land of Dirichlet M bius and Euler from leading an army of jumping fleas in an old problem from the International Mathematical Olympiads to improving our own essay writing strategies from searching for optimal paths on a hot summer day to questioning whether Archimedes was on his way to discovering trigonometry 2000 years ago Do some of these scenarios sound bizarre having never before been associated with mathematics Mathematicians love having fun while doing serious mathematics and that love is what this book intends to share with the reader Whether at a beginner an intermediate or an advanced level anyone can find a place here to be provoked to think deeply and to be inspired to create In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession Titles in this series are co published with the Mathematical Sciences Research Institute MSRI *Mathematical Reminiscences* Howard Eves,2001 Long known as a mathematical storyteller Howard Eves writes his personal reminiscences mostly mathematical some not The cast of characters includes Albert Einstein Norbert Wiener Julian Lowell Coolidge Maurice Frechet Nathan Altshiller Court G H Hardy and many other interesting figures whom he encountered in a long and active life in mathematics In Mathematical Reminiscences we read of Eves famous mathematical museum with its lock of Einstein s hair Hardy s scarf Veblen s bright yellow lead pencil Wiener s hat and much much more **Mathematical Reviews** ,2005 **An Introduction to Topology and Homotopy** Allan J.
