

Neighborhood

"Neighborhood" is a word with many different levels of meaning in mathematics.

One of the most general concepts of a neighborhood of a point $\mathbf{x} \in \mathbb{R}^n$ (also called an epsilon-neighborhood or infinitesimal **open set**) is the set of points inside an n -**ball** with center \mathbf{x} and **radius** $\epsilon > 0$. A set containing an **open neighborhood** is also called a neighborhood.

The **graph neighborhood** of a vertex v in a **graph** is the set of all the vertices adjacent to v generally *including* v itself. More generally, the j th neighborhood of v is the set of all vertices that lie at the distance j from v . The **subgraph** induced by the neighborhood of a graph from vertex v (again, most commonly including v itself) is called the **neighborhood graph** (or sometimes "ego graph" in more recent literature).
