Object Oriented Database Design Concepts And Application:

Object-oriented Database Design Ken S. Brathwaite,1993 This book presents the basic concepts of object oriented database design It discusses several techniques for developing databases and object oriented programming OOP using C and Eiffel The book also provides a definition for the field of object oriented database design explaining the concept of OOP and surveying the available products *Object-oriented Modeling and Design for Database Applications* Michael Blaha,William Premerlani,1998 Written from a software engineering perspective this book shows programmers developers how to build object oriented database applications for distributed client server environments using the newest update of the OMT methodology UML *Emerging Information Technologies for Competitive Advantage and Economic Development* Information Resources Management Association. International Conference,1992-01-01 Keeping up with constant changes and innovations puts a lot of pressure on information providers and users to continuously upgrade their knowledge and skill This change means being flexible enough to recognize that the knowledge you receive today must be constantly updated This book will provide readers with the latest research findings and managerial experiences on a variety of technological innovations of IT *Statistical and Scientific Database Management* Zbigniew Michalewicz,1990-03-07 The purpose of the Fifth International Conference on Statistical and Scientific Databases was to bring together database researchers users and system builders to discuss the particular issues of interest and to propose new solutions to the problems of the area both from the theoretical and from the application point of view This proceedings volume contains three invited papers as well as the other 13 contributions The papers cover a wide area of research object oriented database systems semantic modelling deductive mathematical databases security of statistical databases implementational issues for scientific databases temporal summary table management graphical and visual interfaces query optimization distributed databases and economic and geographical databases *Advances in Object-Oriented Database Systems* Asuman Dogac,M.Tamer Özsu,Alexandros Biliris,Timos Sellis,2013-11-09 Object oriented database management systems OODBMSs have generated significant excitement in the database community in the last decade This interest stems from a real need for data management support for what are called advanced application areas that are not well served by relational technology The case for object oriented technology has been made on three fronts First is the data modeling requirements of the new applications Some of the more important shortcomings of the relational systems in meeting the requirements of these applications include 1 Relational systems deal with a single object type a relation A relation is used to model different real world objects but the semantics of this association is not part of the database Furthermore the attributes of a relation may come only from simple and fixed data type domains numeric character and sometimes date types Advanced applications require explicit storage and manipulation of more abstract types e g images design documents and the ability for the users to define their own application specific types Therefore a rich type system supporting user defined abstract types is required 2 The relational model structures data

in a relatively simple and flat manner Non traditional applications require more complex object structures with nested objects e g a vehicle object containing an engine object

Applications Dimitris Karagiannis, 2013-11-11 The Database and Expert Systems Applications DEXA conferences are dedicated to providing an international forum for the presentation of applications in the database and expert systems field for the exchange of ideas and experiences and for defining requirements for the future systems in these fields After the very promising DEXA 90 in Vienna Austria we hope to have successfully established with this year's DEXA 91 a stage where scientists from diverse fields interested in application oriented research can present and discuss their work This year there was a total of more than 250 submitted papers from 28 different countries in all continents Only 98 of the papers could be accepted The collection of papers in these proceedings offers a cross section of the issues facing the area of databases and expert systems i e topics of basic research interest on one hand and questions occurring when developing applications on the other Major credit for the success of the conference goes to all of our colleagues who submitted papers for consideration and to those who have organized and chaired the panel sessions Many persons contributed numerous hours to organize this conference The names of most of them will appear on the following pages In particular we wish to thank the Organization Committee Chairmen Johann Gordesch A Min Tjoa and Roland Wagner who also helped establishing the program Special thanks also go to Gabriella Wagner and Anke Ruckert Dimitris Karagiannis General Conference Chairman Contents

Conference Committee **Managing Distributed Databases** Donald K. Burleson, 1994 This book arms developers and system managers with battle tested strategies and techniques for ensuring that distributed data is available to all clients in a distributed client server environment Database and Expert Systems Applications A Min Tjoa, Roland Wagner, 1990 Use and development of database and expert systems can be found in all fields of computer science The aim of this book is to present a large spectrum of already implemented or just being developed database and expert systems Contributions cover new requirements concepts for implementations e g languages models storage structures management of meta data system architectures and experiences gained by using traditional databases in as many areas of applications as possible at least in the fields listed The aim of the book is to inspire a fruitful dialogue between development in practice users of database and expert systems and scientists working in the field **Byte**, 1994-04 **Journal of Database Administration**, 1997

Object-oriented Databases with Applications to CASE, Networks, and VLSI CAD Rajiv Gupta, Ellis Horowitz, 1991 Object oriented has become one of the important buzzwords in computer science but as yet there is no clear consensus on what is object oriented programming This book addresses the concepts behind the buzzword and has four goals The first is to provide the reader with a perspective on concepts that have been in development in a diverse set of fields including artificial intelligence database theory programming languages and compiler theory which form the core of the object paradigm Second the text presents an overview of object oriented databases examples of their use and a comparison of strengths and weaknesses Third real world examples are shown to illustrate how they are mapped onto an object oriented framework Finally the programming language C has been adopted by programmers of object oriented databases so there is an overview

of its power and limitations and two different approaches to making a database out of C are examined **The National Guide to Educational Credit for Training Programs** American Council on Education,2005 Highlights over 6 000 educational programs offered by business labor unions schools training suppliers professional and voluntary associations and government agencies **Proceedings** Roland R. Wagner,1997 This volume contains papers from the 1997 Database and Expert Systems Applications DEXA 97 8th International Workshop
