Samuelson,2012-08-21 This new volume explores two alternative economic theories the classical theory and the marginalist or neoclassical theory through a discussion between two eminent economists Pierangelo Garegnani and Paul Samuelson The key themes of the volume are the difference in approaches to the explanation of the distribution of income and relative prices and therefore different approaches to all other economic problems in particular capital accumulation and economic growth The book discusses whether there is a classical approach to the theory of value and distribution at the core of economic theory that is fundamentally different from the later marginalist or neoclassical theory In the volume the late Pierangelo Garegnani argues for the validity of Piero Sraffa s position on this issue whilst the late noble laureate Paul Samuelson vehemently contests it At a time of economic crisis the future of the discipline is far from certain and so it is extremely important to bring these debates back into the light by reproducing them together for the first time A comprehensive introduction by Heinz Kurz sets the debate in this context and provides crucial background to the arguments *Paul*

Neoclassical Theory Structure and Theory Development B. Hamminga, 2012-12-06 There are quite a lot of recent books on the methodology of economics but all proceed from one or more of the following three fundamental assumptions 1 Meta apriorism it is a priori believed that the results of the philosophy of science of the past decades associated with the names of Popper Kuhn and Lakatos yield conceptual frameworks that can be used to describe the product of the economist's endeavours 2 Synchronism it is believed that the inspection of a theory of economics the presentation of some economic belief at a point in time reveals its logical structure and ipso facto the method by which the theory is constructed 3 Credulity it is believed that what economists themselves say on their own methods is true or at least of primary relevance In this book I endeavour to show that these assumptions are false First the philosophies of science by Popper Kuhn and Lakatos did not succeed in constructing a conceptual framework capable of describing theory development in economics Secondly this can only be seen as soon as not Zogic but history is taken to be the referee judging the adequacy of metatheories diachronism Thirdly the results of metaempiricaZ not meta aprioristic diachronic not synchronic research reveals that even economists themselves turn out frequently to have inadequate metatheories upon which it is dangerous to rely suspicion instead of credulity

Boland, 2020-09-23 Many consider Foundations of Economic Method to be Lawrence Boland's best work This updated edition is radically changed from the original and will be much appreciated by thinkers within economics The book positions methodology vis vis the current practice of economists and is all the better for it Yet another book that not only deserves to be read by those within the field of economic methodology but also by those involved in economics at all Boland is back The Palgrave Handbook of the History of Human Sciences David McCallum, 2022-08-27 The Palgrave Handbook of the History of Human Sciences offers a uniquely comprehensive and global overview of the evolution of ideas concepts and policies within the human sciences Drawn from histories of the social and psychological sciences anthropology the history and philosophy of science and the history of ideas this collection analyses the health and welfare of populations evidence of the changing nature of our local communities cities societies or global movements and studies the way our humanness or human nature undergoes shifts because of broader technological shifts or patterns of living This Handbook serves as an authoritative reference to a vast source of representative scholarly work in interdisciplinary fields a means of understanding patterns of social change and the conduct of institutions as well as the

Wade Hands, 2008 Don Ross recent book *Economic Theory and Cognitive Science* 2005 provides an elaborate philosophical defense of neoclassical economics He argues that the central features of neoclassical theory are associated with what he calls the Robbins Samuelson argument pattern RASP and that it can be reconciled with recent developments in experimental and behavioral economics as well as contemporary cognitive science This paper argues that Ross Robbins Samuelson argument pattern is not in the work of either Robbins or Samuelson and in many ways is in conflict with their own versions and defenses of neoclassical theory **Neoclassical Economic Theory, 1870 to 1930** Klaus Hennings, Warren J. Samuels, 2012-12-06 Warren J Samuels Each book in this series explores the present status of its field in terms of where it is how it got there the existing tensions within the field and something of how the field might develop in the future Each book presumes that work in each field is neither settled nor unequivocal Each book attempts to comprehend its field as an evolving developmental process or set of efforts This particular book covering neoclassical economics is the third of three in the field of the History of Economic Thought The others are Pre Classical Economic Thought edited by S Todd Lowry and Classical Political Economy edited by William O Thweatt Each one conducts the same kind of analysis as the others in the series with the understanding that here we are dealing with the history of interpretation rather than a substantive body of analysis of a certain aspect of the economy for example labor or international trade That understanding must be complex and subtle inasmuch as revision of interpretation of earlier ideas is part of the process both cause and consequence of re-analyzing the economy In this group we are interested in how recent and contemporary writers have interpreted the history of economic thought differently both among themselves and from earlier writers 1 NEOCLASSICAL ECONOMIC THEORY 2 Several topics must be discussed to place such work in perspective in part as it is here applied to the history of the interpretation of neoclassical economics **The Cambridge Revival of Political Economy** Nuno Ornelas Martins, 2013-10-23 The marginalist revolution of the late nineteenth century consolidated what Karl Marx and Piero Sraffa called vulgar economy bringing with it an emphasis on a scarcity theory that replaced the classical surplus theory However the classical political economy of Adam Smith and David Ricardo has been revived within the Cambridge economic tradition This book looks at how different branches of the Cambridge economic tradition have focused on various aspects of this revival over time The author shows that classical political economy is distinct from vulgar political economy in terms of its economic social and ethical theory with each difference resting on an issue of ontology Structured in three parts the book

examines the central contested aspects of these theories namely the nature of value the relationship between human beings and social structure and the nature of human wellbeing The Cambridge Revival of Political Economy will be relevant to students and researchers within the fields of political economy history of economic thought politics and philosophy

**Inclusive Economic Theory** Ralph William (Bill) Pfouts, Steven Rosefielde, 2014-11-27 The goal of Inclusive Economics is to tie together various authoritative strands of contemporary economic theory into an easily comprehensible whole that illuminates the need for a broader approach to contemporary economic policymaking undistorted by obsolete 18th century rationalist assumptions about utility ethics worthiness and traditional culture This is accomplished by elaborating the rationalist competitive ideal along the optimizing lines pioneered by Paul Samuelson neoclassical economics plumbing modifications necessitated by Herbert Simon's realist concepts of bounded rationality and satisficing refined further by applying a pragmatist outlook to probe the consequences of relaxing Enlightenment teleological ethical spiritual and cultural taboos The exercise will explain why competitive market economies guided by rational utility seeking invariably are less productive efficient just and beneficent than most theorists concede and will illuminate the full range of interventions needed to achieve better outcomes We call this program in its entirety Inclusive Economics including the integration of micro and macroeconomics
