Exchange & Comparison Two Real Time Operating Systems on a Micro-Controller System Junyi Xu,2014-04-11

Inhaltsangabe Abstract Embedded systems are becoming an integral part of commercial products today Mobile phones watches cars and flights controllers etc are to name a few There are critical elements between the system hardware and the software one of the primary is the Real Time Operating System which ensures control compatibility and timing The Real Time Operating System has to interface communicate well with the hardware below it to prevent casualty and with the software above to ensure the applications running in a proper way Therefore more and more attention is being paid to the porting relationship between Real Time Operating System and Application Software by engineers in embedded field Comparing and evaluating the performance of different Real Time Operating Systems is getting more important Measuring is the only way to provide useful information for example which Real Time Operating System is best suitable for a specific hardware configuration The purpose of this thesis paper is to find an approach to exchange MicroC OS II with NOKIA Car kit OS on a micro controller system Besides porting MicroC OS II to the micro controller system the interfaces to higher level application software should be generated to adapt the application software to MicroC OS II Finally evaluate the advantages and disadvantages of them In chapter 1 a brief introduction is provided In chapter 2 the concept of RTOS and the development of Real Time Kernel are introduced The field on which RTOS is always focusing and why RTOS is especially important in Embedded Systems are explained The essential performance and the differences among several RTOS are also discussed in this chapter In chapter 3 the micro Real Time Kernel MicroC OS II is introduced in details The speciality of MicroC OS II and the services provided from MicroC OS II are explained Also the micro controllers that MicroC OS II supported are introduced In chapter 4 NOKIA Car kit OS NOKIA Car kit Operating System is introduced The development history and some of important service mechanism are introduced briefly In chapter 5 the evaluation and comparison of these two Operating Systems are made The most important characteristics the advantages and disadvantages for both of these two RTOS are discussed In chapter 6 the software mapping layer is discussed in detail In this part the whole software development procedure is explained Issues from problem analyse

Embedded Microcontroller Interfacing for M-COR® Systems

G. Jack Lipovski,2000-08-22 The M CORE family of microprocessors is the latest 32 bit integrated circuit from Motorola designed to be a multi purpose micro controller The processor architecture has been designed for high performance and cost sensitive embedded control applications with particular emphasis on reduced power consumption This is the first book on the programming of the new language instruction set using the M CORE chip Embedded Microcontroller Interfacing for M CORE Systems is the third of a trio of books by G Jack Lipovski from the University of Texas The first two books are on assembly language programming for the new Motorola 6812 16 bit microcontroller and were written to be textbooks and professional references This book was written at the request of the Motorola design team for the professional users of its new and very

successful M CORE chip microcontrollers Written with the complete cooperation and input of the M CORE design engineers at their headquarters in Austin Texas this book covers all aspects of the programming software and hardware of the M CORE chip First introductory level book on the Motorola MoCORE Teaches engineers how a computer executes instructions Shows how a high level programming language converts to assembler language Teaches the reader how a microcontroller is interfaced to the outside world Hundreds of examples are used throughout the text Over 200 homework problems give the reader in depth practice A CD ROM with HIWARE s C compiler is included with the book A complete summary chapter on other available microcontrollers

Computing Technologies and Applications Latesh Malik, Sandhya Arora, Urmila Shrawankar, Maya Ingle, Indu Bhagat, 2021-11-09 Making use of digital technology for social care is a major responsibility of the computing domain Social care services require attention for ease in social systems e farming and automation etc Thus the book focuses on suggesting software solutions for supporting social issues such as health care learning about and monitoring for disabilities and providing technical solutions for better living Technology is enabling people to have access to advances so that they can have better health To undergo the digital transformation the current processes need to be completely re engineered to make use of technologies like the Internet of Things IoT big data analytics artificial intelligence and others Furthermore it is also important to consider digital initiatives in tandem with their cloud strategy instead of treating them in isolation At present the world is going through another possibly even stronger revolution the use of recent computing models to perform complex cognitive tasks to solve social problems in ways that were previously either highly complicated or extremely resource intensive This book not only focuses the computing technologies basic theories challenges and implementation but also covers case studies It focuses on core theories architectures and technologies necessary to develop and understand the computing models and their applications The book also has a high potential to be used as a recommended textbook for research scholars and post graduate programs The book deals with a problem solving approach using recent tools and technology for problems in health care social care etc Interdisciplinary studies are emerging as both necessary and practical in universities This book helps to improve computational thinking to understand and change the world It will be a link between computing and a variety of other fields Case studies on social aspects of modern societies and smart cities add to the contents of the book to enhance book adoption potential This book will be useful to undergraduates postgraduates researchers and industry professionals Every chapter covers one possible solution in detail along with results
