New and Forthcoming Books National Academy Press (U.S.), 1993 *Concepts of Operations for a Reusable Launch Vehicle* Michael A. Rampino, 1997 The United States is embarked on a journey toward maturity as a spacefaring nation One key step along the way is development of a reusable launch vehicle RLV The most recent National Space Transportation Policy August 1994 assigned improvement and evolution of current expendable launch vehicles to the Department of Defense while National Aeronautical Space Administration NASA is responsible for working with industry on demonstrating RLV technology The purpose of this study is to help ensure the US military especially the USAF is prepared to take advantage of RLVs should the NASA led effort to develop an RLV demonstrator prove successful The focus of this study is an explanation

of how the US military could use RLVs by describing and analyzing two concepts of operations Four major conclusions resulted from the analysis First RLVs have military potential They can perform a variety of missions including responsive spacelift reconnaissance and strike However the economic feasibility of using RLVs for earth to earth transportation is questionable Second design choices for an operational RLV will have effects on risk cost capability and operations efficiency Trade offs will have to be made between NASA commercial and military requirements if all three parties are to use the same fleet of RLVs Third increased investment in propulsion technology development is warranted to ensure success Fourth the top priority for the RLV program even from the military s perspective should remain cheap and responsive access to space The research led to three recommendations First the US military should become a more active participant in the RLV program to ensure its requirements are defined and incorporated Second America should not pursue development of operational RLVs before the technology is ready

Highly Operable Propulsion for Reusable Launch Vehicle Applications Michael Marlow,2003 A wide variety of reusable launch vehicle concepts for placing various payloads into low earth orbit are currently being evaluated for potential civil commercial and military applications This recent interest is being driven by a desire to achieve reduced payload launch costs and in some cases very rapid response capability In most of these cases the general requirements of the main propulsion system are similar a high level of operational availability with minimal operational support activity Consequently evaluation of traditional expendable rocket engines as candidates for reusable applications has begun with an emphasis on understanding whether or not a given engine s operating characteristics are inherently more reusable than another In support of a planned program to demonstrate a low cost rapid response reusable launch vehicle several existing rocket engines were evaluated for feasibility to meet the requirements of a sub scale reusable launch vehicle demonstrator Critical propulsion characteristics were defined based on the demonstration objectives of the overall program Potential candidate engines were selected and then evaluated against

these critical propulsion characteristics and a comparative assessment of each engine's ability to satisfy each critical characteristic was generated. Finally a reference engine was designated along with a reference demonstrator vehicle concept. This vehicle concept was evaluated for its feasibility to satisfy the reusable launch vehicle demonstrator program objectives and determined to meet the stated goals with residual capability for possible later applications. **NASA SP.** ,1962 *AIAA 1995 Space Programs and Technologies Conference* ,1995 *Proceedings of the ...
