Chinese Journal of Physics (Peking) ,1967 **Underwater Acoustic Multi-target Tracking** Bin Qi,Lu Wang,Jin Fu,2026-03-24 This book highlights the principles and technology to solve the challenges of multi target tracking in underwater target detection with sonar equipment research as the background While underwater acoustic target detection primarily determines the presence or absence of targets it fails to provide the information about batches Multi target tracking on the other hand focuses on addressing issues including dividing target batches obtaining target start and end times obtaining information about target quantity as well as filtering out false targets and smoothing trajectories For sonar equipment especially that on unmanned platforms multi target tracking is of utmost significance However due to a host

of uncertainties multi target tracking proves extremely challenging in practical sonar applications These uncertainties include 1 Target motion often comes with random interference causing sensors to occasionally miss targets 2 The number of targets in the observation area fluctuates randomly 3 Sensor observations are subject to random noise interference 4 The quantity of sensor observations varies over time in an unpredictable manner 5 Targets may be too close for sensors to distinguish and 6 Sometimes even when there are no targets in the observation area sensors still generate observation data To tackle these issues this book systematically elucidates the fundamental principles of multi target tracking algorithms and introduces a variety of such algorithms Ultimately although the book centers on multi target tracking the operation of a single sonar or multiple sonar devices aims to solve the problem of locating passive targets This in turn enables the calculation of target position heading and speed as well as the estimation of the target s operational status The book is a comprehensive and in depth reference for researchers and engineers engaged in the research and development of sonar equipment as well as graduate students in underwater acoustics
