backward citation patent scores indicated that inventive firms had positive prospects for future returns as evidenced by their Tobin's q ratios because patents incorporating substantial external knowledge were also broadly cited. Results suggested a three year lag in the market's positive assessment of radical inventions after positive evidence first appeared. Post acquisition backward citation patent score patterns reached positive inflection points after four years. Therefore we concluded that the market's assessment of inventions that were created through organizational exploration and learning activities was not instantaneous.

Eric Laithwaite takes the reader on a guided tour through the mysteries of invention, stopping off to examine the laws of nature and engineering. The author discusses religion, economics and cosmology. More than that, the author deals with such fundamental
