Matrices Of Sign Solvable Linear Systems:

Matrices of Sign-Solvable Linear Systems Richard A. Brualdi, Bryan L. Shader, 2009-04-02 In a sign solvable linear system the signs of the coefficients determine the signs of some entries in the solution This type of system is part of a larger study that helps researchers understand if properties of a matrix can be determined from combinatorial arrangements of its elements In this book the authors present the diffuse body of literature on sign solvability as a coherent whole for the first time giving many new results and proofs and establishing many new connections Brualdi and Shader describe and comment on algorithms implicit in many of the proofs and their complexity The book is self contained assuming familiarity only with elementary linear algebra and graph theory Intended primarily for researchers in combinatorics and linear algebra it should also be of interest to computer scientists economists physicists chemists and engineers
