Recoding Nature Richard A. Hindmarsh, Geoffrey Lawrence, 2004 The book addresses some fundamental and profound questions such as Are GM foods safe to eat What do consumers think about GM foods and alternatively organic produce What are the real risks of genetic pollution And is it appropriate to delete a supposed gene for sadness Recoding Nature challenges the assumptions of those preparing the world for a recoded DNA future Recoding Nature is at the cutting edge of critical reflection about the biotechnology revolution the redesign of nature through genetically modified plants animals and even designer humans to eat What do consumers think about GM foods and alternatively organic produce What are the real risks of genetic pollution Is it appropriate to delete a supposed gene for sadness Where did the idea of the DNA code come from and how is it shaping thought for a genetics future Why has commercial release of GM canola been approved when all canola growing States have declared moratoriums there genes for crime or is this just an illusion What about the prospects of corporate bioprospecting among Indigenous peoples And why have large grass roots movements in Asia surfaced to contest the notion that GM foods will feed the hungry In fourteen essays by Australian and New Zealand writers critiquing the new biology and with a stimulating foreword by Mae Wan Ho the UK scientist leading a global attack on genetic engineering as bad science Recoding Nature challenges the assumptions of those preparing the world for a recoded DNA future

Technology, Transgenics and a Practical Moral Code Dennis R. Cooley, 2009-09-28 Most philosophers still like to feel that they have a special subject matter well insulated from anything that the social scientists and scientists in general have to tell them That is not healthy for philosophy and it is all too likely to lead to an ethics that continues as of old to plead for its ultimates the fact that one is totally ineffectual being decently concealed by an impressive terminology Stevenson 1963 pp 114 5 Many so called moral theories do not even attempt to explain or justify common morality but are used to generate guides to conduct intended to replace common morality These proposed moral guides those generated by all of the standard consequentialist contractarian and deontological theories are far simpler than the common moral system and sometimes yield totally unacceptable answers to moral problems Since these philosophers who put forward these theories have usually dismissed common morality as confused they are completely unaware of the complexity involved in making moral decisions and judgments It is not surprising that many who take morality seriously and try to apply it to real problems faced by actual people are so critical of moral theory Bernard Gert 1998 p 6 As both Stevenson and Gert note ethics requires social and other sciences for by its very nature ethics is a practical enterprise Biotechnology and Genetic Engineering Facts On File, Incorporated, 2008 Provides an overview chronology of events glossary and annotated bibliography on biotechnology and genetic engineering Biotechnology Nico Stehr, 2017-09-08 While other books have addressed isolated aspects of recent developments in the biomedical sciences Biotechnology Between Commerce and Civil Society is the first book to engage with the full range of biotechnology's implications for social science and for society at large Professor Volker Meja New

scientific knowledge is no longer merely the key to unlocking the secrets of nature and society. It now represents the becoming of a new world. Scientific developments affect the ways in which we conduct our affairs as well as how we comprehend the changes underway as the result of novel technical artefacts and scientific knowledge. The practical fruits of biotechnology are a case in point: they have grasped our imaginations and generated worldwide debate and concern. Debates on biotechnology shift between images of utopia and dystopia. The social sciences deserve a voice in the debate and can do so through sober examination of the economic, social, and cultural implications of biotechnology. Some economists even predict that the importance of biotechnology as the technology of the future will far exceed that of the information technologies, in particular the Internet. The contributors to this volume are drawn from a broad spectrum of the social sciences and include Nico Stehr, Gene Rosa, Steve Fuller, Steve Best, and Douglas Kellner, Nikolas Rose, Fred Buttel, Javier Lezaun, Anne Kerr, Susanna Hornig, Priest, and Toby Ten Eyck, Martin Schulte, Alexander Somek, Steven P. Vallas, Daniel Lee Kleinman, Abby Kinchy, and Raul Necochea, Herbert Gottweis, J. Rogers Hollingsworth, Gysli Pálsson, Elizabeth Ettore, Richard Hindmarch, and Reiner Grundmann. The impact of science on society is destined to be a fundamental concern in the new century. This volume illustrates the contributions anthropology, law, political science, and sociology can make to the ongoing discussions about the role of biotechnology in modern societies. Nico Stehr is senior research associate, Institut für Technikfolgenabschätzung, Forschungszentrum Karlsruhe, and Institut für Kostenforschung, GKSS, Germany. He also is a fellow in the Center for Advanced Cultural Studies in Essen, Germany, editor of the *Canadian Journal of Sociology*, and a fellow of the Royal Society of Canada. Among his recent books are *Werner Sombart: Economic Life in the Modern Age* with Reiner Grundmann, published by Transaction; *The Fragility of Modern Societies: Knowledge and Risk in the Information Age*; *Knowledge and Economic Conduct: The Social Foundations of the Modern Economy*; and *Wissenspolitik: Die Bewachung des Wissens*. **Crucible For Survival** Timothy Doyle, Melissa Risely, 2008-07-22. In this collection, Timothy Doyle and Melissa Risely bring together an international group of environmentalists, political scientists, and international relations scholars to address key issues vital to determining the human and environmental security of the Indian Ocean Region. Addressing topics that include agrifood production systems, the geopolitics of water resources along the Mekong River basin, oil production, transportation, waste disposal, and climate change, the contributors highlight the importance of regional collaboration and offer policy and management strategies for cooperative, multinational problem solving. Resistance Is Fertile Wilhelm Peekhaus, 2013-03-13. For decades, government, industry, and the mainstream media have extolled the virtues of biotechnology, downplaying its negative side effects and claiming that it can improve everything from our health and diet to our environment and economy. Focusing on agricultural biotechnology, *Resistance Is Fertile* challenges this dominant rhetoric by offering a critical analysis of the role of capital and the state in the development of this technoscience. Wilhelm Peekhaus analyzes the major issues around which opponents of agricultural biotechnology in Canada are mobilizing resistance, namely the enclosure of the biological commons.

and the knowledge commons which together form the BioCommons What emerges is an empirically and theoretically informed analysis of topics such as Canada's regulatory regime the corporate control of seeds the intellectual property system and attempts to construct and control public discussions about agricultural biotechnology
