Parabolic Quasilinear Equations Minimizing Linear Growth Functionals Fuensanta Andreu-Vaillo, Vicent Caselles, José M. Mazón, 2012-12-06 Award winning monograph of the Ferran Sunyer i Balaguer Prize 2003 This book contains a detailed mathematical analysis of the variational approach to image restoration based on the minimization of the total variation submitted to the constraints given by the image acquisition model This model initially introduced by Rudin Osher and Fatemi had a strong influence in the development of variational methods for image denoising and restoration and pioneered the use of the BV model in image processing After a full analysis of the model the minimizing total variation flow is studied under different boundary conditions and its main qualitative properties are exhibited In particular several explicit solutions of the denoising problem are computed

Evolution PDEs with Nonstandard Growth Conditions Stanislav Antontsev, Sergey Shmarev, 2015-04-01 This monograph offers the reader a treatment of the theory of evolution PDEs with nonstandard growth conditions This class includes parabolic and hyperbolic equations with variable or anisotropic nonlinear structure We develop methods for the study of such equations and present a detailed account of recent results An overview of other approaches to the study of PDEs of this kind is provided The presentation is focused on the issues of existence and uniqueness of solutions in appropriate function spaces and on the study of the specific qualitative properties of solutions such as localization in space and time extinction in a finite time and blow up or nonexistence of global in time solutions Special attention is paid to the study of the properties intrinsic to solutions of equations with nonstandard growth

*Variational and Diffusion Problems in Random Walk Spaces* José M. Mazón, Marcos Solera-Diana, J. Julián Toledo-Melero, 2023-08-04 This book presents the latest developments in the theory of gradient flows in random walk spaces A broad framework is established for a wide variety of partial differential equations on nonlocal models and weighted graphs Within this framework specific gradient flows that are studied include the heat flow the total variational flow and evolution problems of Leray Lions type with different types of boundary conditions With many timely applications this book will serve as an invaluable addition to the literature in this active area of research Variational and Diffusion Problems in Random Walk Spaces will be of interest to researchers at the interface between analysis geometry and probability as well as to graduate students interested in exploring these areas

*Singular Sets of Minimizers for the Mumford-Shah Functional* Guy David, 2005-03-22 The Mumford Shah functional was introduced in the 1980s as a tool for automatic image segmentation but its study gave rise to many interesting questions of analysis and geometric measure theory The main object under scrutiny is a free boundary  $K$  where the minimizer may have jumps The book presents an extensive description of the known regularity properties of the singular sets  $K$  and the techniques to get them It is largely self contained and should be accessible to graduate students in analysis The core of the book is composed of regularity results that were proved in the last ten years and which are presented in a more detailed and unified way

**Mathematics Across Contemporary Sciences** Taher Abualrub, Abdul Salam Jarrah, Sadok Kallel, Hana Sulieman, 2017-01-22 This work presents invited contributions from the second International Conference on Mathematics and Statistics jointly organized by the AUS American University of Sharjah and the AMS American Mathematical Society Addressing several research fields across the mathematical sciences all of the papers were prepared by faculty members at universities in the Gulf region or prominent international researchers The current volume is the first of its kind in the UAE and is intended to set new standards of excellence for collaboration and scholarship in the region

Perturbation Methods and Semilinear Elliptic Problems on  $\mathbb{R}^n$  Antonio Ambrosetti, Andrea Malchiodi, 2005-11-18 Several important problems arising in Physics Differential Geometry and other  $n$  topics lead to consider semilinear variational elliptic equations on  $\mathbb{R}^n$  and a great deal of work has been devoted to their study From the mathematical point of view the main interest relies on the fact that the tools of Nonlinear Functional Analysis based on compactness arguments in general cannot be used at least in a straightforward way and some new techniques have to be developed  $n$  On the other hand there are several elliptic problems on  $\mathbb{R}^n$  which are perturbative in nature In some cases there is a natural perturbation parameter like in the bifurcation from the essential spectrum or in singularly perturbed equations or in the study of semiclassical standing waves for NLS In some other circumstances one studies perturbations either because this is the first step to obtain global results or else because it often provides a correct perspective for further global studies For these perturbation problems a specific approach that takes advantage of such a perturbative setting seems the most appropriate These abstract tools are provided by perturbation methods in critical point theory Actually it turns out that such a framework can be used to handle a large variety of equations usually considered different in nature The aim of this monograph is to discuss these abstract methods together with their applications to several perturbation problems whose common feature is to involve semilinear Elliptic Partial Differential Equations on  $\mathbb{R}^n$  with a variational structure

**On the Topology of Isolated Singularities in Analytic Spaces** José Seade, 2005-11-18 This book has been awarded the Ferran Sunyer i Balaguer 2005 prize The aim of this book is to give an overview of selected topics on the topology of real and complex isolated singularities with emphasis on its relations to other branches of geometry and topology The first chapters are mostly devoted to complex singularities and a myriad of results spread in a vast literature which are presented here in a unified way accessible to non specialists Among the topics are the fibration theorems of Milnor the relation with 3 dimensional Lie groups exotic spheres spin structures and 3 manifold invariants the geometry of quadrics and Arnold's theorem which states that the complex projective plane modulo conjugation is the 4 sphere The second part of the book studies pioneer work about real analytic singularities which arise from the topological and geometric study of holomorphic vector fields and foliations In the low dimensional case these turn out to be related to fibred links in the 3

sphere defined by meromorphic functions This provides new methods for constructing manifolds equipped with a rich geometry The book is largely self contained and serves a wide audience of graduate students mathematicians and researchers interested in geometry and topology
