Paradigm Change In Technology:

Paradigm Shift in Technologies and Innovation Systems John Cantwell, Takabumi Hayashi, 2019-11-02 This book provides some new ideas on the conceptualization of a shift in technological paradigm and it explores in depth the relevance of this concept for research on innovation systems It examines text mining software and analyzes patent data as well as academic and business journals to illustrate the paradigm shift of newly emerging technologies such as the all solid state battery and automatic driving for electric vehicles and surgical robots It also explores the critical role of emerging software technologies by examining US EU and Japanese patent statistics Highlighting the paradigm shift of technologies since the 1990s and the geographical dispersion of innovative capabilities it identifies essential trends toward new innovation systems as well as the concentration and dispersion of national and corporate R D capabilities that have taken place as a result In this new paradigm the competitiveness of a company is decisively determined by other innovations in systems and management Since the 1990s when a network economy began to be established and technological know how came to be easily transferred across borders the changing structure of technological activities has required organizations with traditional integral and closed architecture models to move toward open innovation or modular architectures These changes involve wider technological areas and cognitive diversity among international inter firm and intra firm R D networks This book is highly recommended not only to academicians but also to business people seeking an in depth and up to date overview of the paradigm shift of technologies and new innovation systems

Blockchain as both ICT and institutional technology Marcel Kleber, 2019-10-31 Master s Thesis from the year 2019 in the subject Economics Monetary theory and policy grade 2.0 University of Potsdam language English abstract This thesis

explores and analyses the technical and economic factors that determine the potential of blockchain technology for economy and society and their interactions At the technical level blockchain technology is portrayed as a combination of different base technologies It enables new potentially disruptive applications by providing an efficient technical solution for the fundamental double spending problem Based on these findings blockchain technology is analyzed regarding a new Techno economic paradigm However this does not yet appear to be the case at least from an isolated perspective From an institutional economics perspective blockchain technology proves to be a rule based system and thus a basis for alternative institutions On the one hand these enable new forms of economic interaction and coordination and on the other hand these are subject to novel governance mechanisms It turns out that these decentralized blockchain based forms can lead to higher efficiency in systems that have been dependent on traditional intermediaries up to now due to lower transaction costs In contrast there emerge new intermediaries within the blockchain ecosystem which reminds of traditional schemes
