Research Directions In Concurrent Object:

Research Directions in Concurrent Object-Oriented Programming Gul Agha, Peter Wegner, Akinori Yonezawa, 2003-02-01 This collection of original research provides a comprehensive survey of developments at the leading edge of concurrent object oriented programming It documents progress from general concepts to specific descriptions in programming language design semantic tools systems architectures and applications Chapters are written at a tutorial level and are accessible to a wide audience including researchers programmers and technical managers The problem of designing systems for concurrent programming has become an increasingly important area of research in computer science with a concomitant increase in the popularity of object based programming Because parallelism is a natural consequence of the use of objects the development of systems for concurrent object oriented programming is providing important software support for a new generation of concurrent computers

Concurrent Object-Oriented Programming and Petri Nets Gul A. Agha, Fiorella De Cindio, Grzegorz Rozenberg, 2003-06-29 Concurrency and distribution have become the dominant paradigm and concern in computer science Despite the fact that much of the early research in object oriented programming focused on sequential systems objects are a natural unit of distribution and concurrency as elucidated early on by research on the Actor model Thus models and theories of concurrency the oldest one being Petri nets and their relation to objects are an attractive topic of study This book presents state of the art results on Petri nets and concurrent object oriented programming in a coherent and competent way The 24 thoroughly reviewed and revised papers are organized in three sections The first consists of long papers each presenting a detailed approach to integrating Petri nets and object orientation Section II includes shorter papers with emphasis on concrete examples to demonstrate the approach Finally section III is devoted to papers which significantly build on the Actor model of computation
