ELECTRONIC RESOURCE MANAGEMENT IN ACADEMIC
LIBRARIES: TOOLS AND TECHNIQUES

G. Stephen (Dr.)

Assistant Librarian, NIELIT-Itanagar, Arunachal Pradesh

Abstract - Libraries provide access to the e-resources in a wide variety formats such as e-databases, e-books, e-theses and dissertations, e-journals, digitized & born-digital documents, digital images, streaming video, sound, audio books and Internet/Web resources. To manage this diversity of e-resources is a challenge before library professionals. An overarching theme with electronic resource management is the rapid growth of electronic resources. Because of this growth, libraries are experiencing issues related to time management, staffing, and the time-honored task of deliberating the set-up of logical workflow systems. Unlike the traditional library, workflow of ordering and paying for print resources, cataloging those items, and processing them for the shelves—a workflow in which the different library units know their roles and responsibilities—most libraries consolidate all things such as A-Z title lists, federated search engines, e-journals, abstract-and-indexing databases, dark archives and electronic resource management tools, and allow an academic librarian to handle most, if not all, responsibilities from pre-order activities to access, set-up and maintenance. This paper describes about ERM, Life Cycle of ERM, Open source and Commercial ERM products, and some best practices of ERM in leading world class institutions.

Key Words - ERM, Academic Librarians, E-resources, Library, Search Engine, databases.

1. INTRODUCTION

Electronic Resource Management (ERM) is the practices and techniques used by librarians and library staff to track the selection, acquisition, licensing, access, maintenance, usage, evaluation, retention, and de-selection of a library's electronic information resources. These resources include, but are not limited to, electronic journals, electronic books, streaming media, databases, datasets, CD-ROMs, and computer software. As they attempt to maintain some control over their e-resources, librarians find themselves lost in a mire of spreadsheets and e-mail messages, and responsible for dealing with a variety of independent systems and data containers that are not integrated with each other. Too often, librarians rely on their memory alone to coordinate systems such as the acquisition module of their integrated library system, their alphabetic list for electronic journals and databases, their meta search tool, and their local link server. In addition to the initial effort of setting up information in multiple places and the potential lack of consistency between systems, considerable duplication of effort is likely to occur. Much of a librarian's success at carrying out necessary tasks is based on personal experience; however, because the knowledge and experience gained from dealing with e-resources is often vested in too few people- Sometimes only one –libraries are left at risk.

2. ERM HISTORY AND INITIATIVE

Following the advent of the Digital Revolution, libraries began incorporating electronic information resources into their collections and services for electronic technologies made access to information more direct, convenient, and timely. In January 2000, the Digital Library Federation (DLF) conducted an informal survey aimed at identifying the major challenges facing research libraries regarding their use of information technologies. The survey revealed that digital collection development was considered the greatest source of anxiety and uncertainty among librarians, and that knowledge regarding the handling of electronic resources was rarely shared outside individual libraries. As a result, the Digital Library Federation created the Collection Practices Initiative and commissioned three reports with the goal of documenting effective practices in electronic resource management. In his 2001 report entitled 'Selection and Presentation of Commercially Available Electronic Resources', Timothy Jewell of the University of Washington discussed the home-grown and ad hoc management techniques academic libraries were employing to handle the acquisition, licensing, and activation of electronic resources.

Through the efforts of Adam Chandler of Cornell University, a web site was created to host the information emanating from that study. Furthermore, a meeting held at the annual ALA conference in June 2001 led to establishment of
