Situative (Brown, Collins, & Duguid, 1989; Greeno, 1997; Kirshner & Whitson, 1997; Lave & Wenger, 1991) and distributed (Pea, 1993; Salomon, 1993) theories of cognition increasingly are being proposed as alternatives to the traditional individualist notion offered by cognitive psychology. From this perspective, *knowledge*, perhaps more aptly termed *knowing about*, is no longer conceived of as a static structure residing in the individual's head; instead, knowing is a process distributed across the knower, the environment in which knowing occurs, and the activity in which the learner is participating. Thus, knowing and context are irreducibly co-constituted (Barab, Hay, Barnett, & Squire, in press; Greeno, 1998), and learning is (re)conceived as fundamentally constitutive of the contextual particulars in which it is nested (Cobb & Yackel, 1996; Lave, 1997). Environments developed to support such learning, what we are calling *dynamical learning environments* (DLEs), are not simply backdrops for supporting the transmission of content, but are considered dynamic arenas supporting trajectories of participation that are reciprocally constituted by and within context (Barab & Duffy, 2000; Cobb & Bowers, 1999). How one begins to account for learning and the potential of a learning context to support learning is the focus of this special issue.
