*New Directions in Bioprocess Modeling and Control* Michael A. Boudreau, Gregory K. McMillan, 2007 Models offer benefits even before they are put on line Based on years of experience the authors reveal in *New Directions in Bioprocess Modeling and Control* that significant improvements can result from the process knowledge and insight that are gained when building experimental and first principle models for process monitoring and control Doing modeling in the process development and early commercialization phases is advantageous because it increases process efficiency and provides ongoing opportunities for improving process control This technology is important for maximizing benefits from analyzers and control tool investments If you are a process

Modular Learning in Neural Networks Tomas Hrycej, 1992-10-09 Modular Learning in Neural Networks covers the full range of conceivable approaches to the modularization of learning including decomposition of learning into modules using supervised and unsupervised learning types decomposition of the function to be mapped into linear and nonlinear parts decomposition of the neural network to minimize harmful interferences between a large number of network parameters during learning decomposition of the application task into subtasks that are learned separately decomposition into a knowledge based part and a learning part The book attempts to show that modular learning based on these approaches is helpful in improving the learning performance of neural networks It demonstrates this by applying modular methods to a pair of benchmark cases a medical classification problem of realistic size encompassing 7 200 cases of thyroid disorder and a handwritten digits classification problem involving several thousand cases In so doing the book shows that some of the proposed methods lead to substantial improvements in solution quality and learning speed as well as enhanced robustness with regard to learning control parameters
