Neural Networks Vol 3 Concepts Applications And Implementations:

First Course on Fuzzy Theory and Applications Kwang Hyung Lee,2006-11-30 Fuzzy theory has become a subject that generates much interest among the courses for graduate students However it was not easy to find a suitable textbook to use in the introductory course and to recommend to the students who want to self study The main purpose of this book is just to meet that need The author has given lectures on the fuzzy theory and its applications for ten years and continuously developed lecture notes on the subject This book is a publication of the modification and summary of the lecture notes The fundamental idea of the book is to provide basic and concrete concepts of the fuzzy theory and its applications and thus the author focused on easy illustrations of the basic concepts There are numerous examples and figures to help readers to understand and also added exercises at the end of each chapter This book consists of two parts a theory part and an application part The first part theory part includes chapters from 1 to 8 Chapters 1 and 2 introduce basic concepts of fuzzy sets and operations and Chapters 3 and 4 deal with the multi dimensional fuzzy sets Chapters 5 and 6 are extensions of the fuzzy theory to the number and function and Chapters 7 and 8 are developments of fuzzy properties on the probability and logic theories

Caianiello,1993-02-04 The textbook aims to present general relativity and modern cosmology in a friendly form suitable for advanced undergraduates The text begins with a self contained introduction to the theory of manifolds and then develops the tools needed to understand curved spaces and curved spacetimes Special relativity can then be understood in a geometrical context bypassing some of the difficulties students have when encountering relativistic effects e g time dilation and length contraction for the first time The theory of curvature and its effects leads to the Einstein field equations and its classic tests in the precession of Mercury and the deflection of starlight The second part of the book covers modern cosmology starting with the evolution equations for the expansion of the universe The microwave background evidence for dark matter and the clustering of galaxies are examined in detail

Zaghloul,Jack L. Meador,Robert W. Newcomb,2012-12-06 When confronted with the hows and whys of nature s computational engines some prefer to focus upon neural function addressing issues of neural system behavior and its relation to natural intelligence Then there are those who prefer the study of the mechanics of neural systems the nuts and bolts of the wetware the neurons and synapses Those who investigate pulse coded implementations of artificial neural networks know what it means to stand at the boundary which lies between these two worlds not just asking why natural neural systems behave as they do but also how they achieve their marvelous feats The research results presented in this book not only address more conventional abstract notions of neural like processing but also the more specific details of neural like processors It has been established for some time that natural neural systems perform a great deal of information processing via electrochemical pulses Accordingly pulse coded neural network concepts are receiving increased attention in artificial

neural network research This increased interest is compounded by continuing advances in the field of VLSI circuit design This is the first time in history in which it is practical to construct networks of neuron like circuits of reasonable complexity that can be applied to real problems We believe that the pioneering work in artificial neural systems presented in this book will lead to further advances that will not only be useful in some practical sense but may also provide some additional insight into the operation of their natural counterparts
