

The algebraic-geometric AKNS potentials

Abstract. We characterize the algebraic-geometric potentials for the Schrödinger and AKNS operators using the Weyl m -functions and the Floquet exponent for these operators. The characterization is this: among random ergodic Schrödinger operators, the algebraic-geometric potentials are those for which (i) the spectrum is a union of finitely many intervals (or bands); (ii) the Lyapunov exponent vanishes on the spectrum.

1. Introduction

Our goal in this paper is to give a simple and rather surprising characterization of the finite-band potentials for the Schrödinger and AKNS (after Ablowitz, Kaup, Newell, and Segur [2], see also [35]) operators. Our characterization is based on properties of the Weyl m -functions m_\pm of these operators, together with certain ideas from the theory of algebraic curves and from ergodic theory and dynamical systems.

Although we are primarily interested in the AKNS operator, we begin the discussion by considering the one-dimensional Schrödinger equation

$$L\phi = \left(-\frac{d^2}{dx^2} + y(x) \right) \phi = \lambda\phi$$

with a real bounded measurable potential $y(x)$. In recent years, L has been intensively studied from two points of view. The first is algebraic-geometric; one considers certain quasi-periodic potentials $y(x)$ for which L has finite-band spectrum. Such a potential y can be calculated by evaluating a meromorphic function (abelian function), defined on the Jacobi variety $J(C)$ of a certain hyperelliptic curve C , along a rectilinear winding in $J(C)$ [8], [25], [26]. Thus $y(x)$ can be expressed in terms of the θ -function of C .

The second point of view is ergodic-theoretic. One begins with a family $\mathcal{V} = \{y\}$ of potentials which form a stationary ergodic process with ergodic measure ν (see §3 for our definitions of these terms). One introduces a Floquet exponent $\alpha(\lambda) = \beta(\lambda) + i\nu(\lambda)$ [20], [14], where $\beta(\lambda)$ is the Lyapunov exponent and $\nu(\lambda)$ the rotation number-integrated density of states [20], [3]. We delay definitions to §3, and note only that $\beta(\lambda)$ determines the exponential growth rate of vectors $\begin{pmatrix} \phi(x) \\ \phi'(x) \end{pmatrix}$, where $L\phi = \lambda\phi$.
