INTRODUCTION TO THE NEURAL CONTROL OF BEHAVIOUR

- The brain is an astounding organ
- Rene Descartes - Dualist framework
 - The mind was seen as a separate entity existing outside of our biology, yet in control of our actions and thoughts
 - The physical brain was thought to serve in part as a connection between the mind and body
- The challenge for neuroscience is to understand how the biological brain produces the mental processes of the mind
 - Consider the brain to be the hardware that is driven by the software of the mind
- Neuroscience can be studied alongside psychology at multiple levels

THE NEURON

- Cells specialize to a variety of functions
- Neural anatomy is prime for communicating information
- Neuron contains 2 different zones
 - Receptive zone - receive signals from neurons
 - Dendrite - reach out to other neurons & receives signals
 - Cell body (genetic structure, maintain structure, provide energy)
 - Transmission zone - pass signals to other cells
 - Passed from the receptive zone
 - Axons (short & long)
 - Axon terminal (terminal bouton) - to transmit the signal further
 - Glial cells support, nourish, and provide insulation for neurons
- Neurons and glial cells create a complex network for information transfer

THE ACTION POTENTIAL

- Cell membrane is semi-permeable; contains channels
 - Potassium & sodium channels
- The movement of ions across a membrane dictates neural communication
- A resting electrical imbalance exists between the two sides of neurons
- Resting potential (-70mv)
- Leak potassium channels maintain the resting potential of a neuron

- Leak potassium channel is always on
- Sodium and chloride ions rest on the outside of the cell
- Ligand gated channels only work when ligand/other substance binds to it
- Voltage gated channels drive the action potential
- The action potential is the trigger for neural communication
 - Na⁺ channels open → Na⁺ rushing into the cell → K⁺ leave the cell through the leak channels → voltage gated K⁺ channel opens → more K⁺ leave the cell → Na⁺ channels close; K⁺ channel remains open → K⁺ continues to leave the cell → K⁺ channel closed → resting potential
 - Absolute - second action potential can't be activated
 - Relative - second action potential may be activated; second action potential must be a larger stimulus (greater intensity) than the first

Neuroscience protocols , Books in Print ,1991 Subject Guide to Books in Print ,1997 Preventing Chemical Weapons Michael Crowley, Malcolm Dando, Lijun Shang, 2018-08-20 The life and chemical sciences are in the midst of a period of rapid and revolutionary transformation that will undoubtedly bring societal benefits but also have potentially malign applications notably in the development of chemical weapons Such concerns are exacerbated by the unstable international security environment and the changing nature of armed conflict which could fuel a desire by certain States to retain and use existing chemical weapons as well as increase State interest in creating new weapons whilst a broader range of actors may seek to employ diverse toxic chemicals as improvised weapons Stark indications of the multi faceted dangers we face can be seen in the chemical weapons attacks against civilians and combatants in Iraq and Syria and also in more targeted chemical assassination operations in Malaysia and the UK Using a multi disciplinary approach and drawing upon an international group of experts this book analyses current and likely near future advances in relevant science and technology assessing the risks of their misuse The book examines the current capabilities limitations and failures of the existing international arms control and disarmament architecture notably the Chemical Weapons Convention in preventing the development and use of chemical weapons Through the employment of a novel Holistic Arms Control methodology the authors also look beyond the bounds of such treaties to explore the full range of international law international agreements and regulatory mechanisms potentially applicable to weapons employing toxic chemical agents in order to develop recommendations for more effective routes to combat their proliferation and misuse A particular emphasis is given to the roles that chemical and life scientists health professionals and wider informed activist civil society can play in protecting the prohibition against poison and chemical weapons and in working with States to build effective and responsive measures to ensure that the rapid scientific and technological advances are safeguarded from hostile use and are instead employed for the benefit of us all

Preventing Weaponization of CNS-acting Chemicals Michael Crowley, Malcolm Dando,2025-11-24 Recent advances in neuroscience the study of the mechanisms within the brain that underlie our behaviours and what happens when these go wrong have been profound However benignly intended neurological research that seeks to understand dysfunction in the central nervous system CNS could be misused for example in the development of novel CNS acting chemical agent weapons for use in armed conflict and also in repression of civilian populations This book follows a 3 step Holistic Arms Control approach examining the bio chemical agents and relevant physiological systems they affect as well as associated dual use technologies that need to be regulated analysing a range of potentially applicable international law international arms control disarmament and other instruments and attendant control regimes constraining misuse and finally providing a strategy to strengthen existing regulatory mechanisms as well as suggest new measures to prevent the misuse of the neurosciences and associated dual use technologies without limiting the widespread health and other societal benefits that flow from their benign application Suitable for biochemists and researchers in the areas of neuroscience neurochemistry and neuropharmacology this book will also be of interest for those working in arms control disarmament and related legal fields as well as forensic medicine and toxicology
