### **Report by:**

### **1. Introduction**

This poster outlines the work on parallel object-oriented programming languages within the CoSIDE group at the Dept. of Computer Science, University College London. CoSIDE (The COOTS C++ & Solve Integrated Development Environment) is an object-oriented programming environment designed to support research in a wide range of areas. These areas include the design and implementation of parallel object-oriented programming languages (Solve and UC++), the design and implementation of user interfaces for programming environments (CogBrow) and the uses of graph models of object systems (Graphic Knowledge Interfaces). This poster concentrates on the programming languages UC++ and Solve, along with aspects of the CoSIDE environment. The work described here is being carried out as part of the COOTS project (Concurrent Object-Oriented Languages Targetting Parallel Systems), IED3/I/1059, in collaboration with the DRA Electronics Division (Malvern) and Harlequin Ltd.

### **2. The CoSIDE Environment**

CoSIDE has been developed as a common environment linking together various strands of work centering on parallel object-oriented programming. The CoSIDE implementation is designed to support:

- Multiple OO languages, coexisting within the same programming environment. Currently the languages UC++ and Solve are supported.
- Parallel programming, by providing infrastructure within which a parallel object-oriented program can run.
- Incremental compilation, by providing data structures to store information between compilations.
- Interpreted execution.
- Debugging, either of interpreted or external parallel programs
- Re-targetable code generation for multiple target systems.
- Advanced user interface design.

### **3. UC++: Parallel C++**

UC++ is a parallel version of C++, implemented as an extension of the semantics of C++, adding the concept of Active Object. Each Active Object is associated with a virtual processor and may (potentially) execute member functions in parallel with other active objects. Active objects may be created either statically or dynamically.
