## Quantum Dot Bioconjugates for Ultrasensitive Nonisotopic Detection

Warren C. W. Chan and Shoung Ho Park

Highly luminescent semiconductor quantum dots (QDs) with surface-capped carboxylic acid groups have been covalently coupled to biomolecules for use in ultrasensitive biological detection. In comparison with organic dyes such as rhodamine, this class of luminescent labels is 20 times as bright, 100 times as stable against photobleaching, and one-third as wide in spectral bandwidth. These nanometer-sized conjugates are water-soluble and biocompatible. Quantum dots that were labeled with the protein transferin underwent receptor-mediated endocytosis in cultured HeLa cells, and those dots that were labeled with immunoglobulins recognized specific antibodies or antigens.
