Secure Internet Programming Security Issues For Mobile And Distributed Objects:

Secure Internet Programming Jan Vitek, Christian D. Jensen, 2007-10-23 Large scale open distributed systems provide an infrastructure for assembling global applications on the basis of software and hardware components originating from multiple sources Open systems rely on publicly available standards to permit heterogeneous components to interact The Internet is the archetype of a large scale open distributed system standards such as HTTP HTML and XML together with the widespread adoption of the Java language are the cornerstones of many distributed systems This book surveys security in large scale open distributed systems by presenting several classic papers and a variety of carefully reviewed contributions giving the results of new research and development Part I provides background requirements and deals with fundamental issues in trust programming and mobile computations in large scale open distributed systems Part II contains descriptions of general concepts and Part III presents papers detailing implementations of security concepts [Algorithms and Theory of Computation Handbook - 2 Volume Set](#) Mikhail J. Atallah, Marina Blanton, 2022-05-29 [Algorithms and Theory of Computation Handbook](#) Second Edition in a two volume set provides an up to date compendium of fundamental computer science topics and techniques It also illustrates how the topics and techniques come together to deliver efficient solutions to important practical problems New to the Second Edition Along with updating and revising many of the existing chapters this second edition contains more than 20 new chapters This edition now covers external memory parameterized self stabilizing and pricing algorithms as well as the theories of algorithmic coding privacy and anonymity databases computational games and communication networks It also discusses computational topology computational number theory natural language processing and grid computing and explores applications in intensity modulated radiation therapy voting DNA research systems biology and financial derivatives This best selling handbook continues to help computer professionals and engineers find significant information on various algorithmic topics The expert contributors clearly define the terminology present basic results and techniques and offer a number of current references to the in depth literature They also provide a glimpse of the major research issues concerning the relevant topics *Information Assurance and Computer Security* Johnson P. Thomas, Mohamed Essaïdi, 2006 The increasing dependence on information technology creates new opportunities for the benefit of society However it also opens an avenue that can be exploited for illicit purposes This book provides a discussion on a variety of viewpoints on some of the main challenges facing secure systems **Communications and Multimedia Security** David Chadwick, Bart Preneel, 2008-09-26 *Communications and Multimedia Security* is an essential reference for both academic and professional researchers in the fields of Communications and Multimedia Security This state of the art volume presents the proceedings of the Eighth Annual IFIP TC 6 TC 11 Conference on Communications and Multimedia Security September 2004 in Windermere UK The papers presented here represent the very latest developments in security research from leading people in the field The papers explore a wide variety of subjects including privacy protection and trust

negotiation mobile security applied cryptography and security of communication protocols Of special interest are several papers which addressed security in the Microsoft Net architecture and the threats that builders of web service applications need to be aware of The papers were a result of research sponsored by Microsoft at five European University research centers This collection will be important not only for multimedia security experts and researchers but also for all teachers and administrators interested in communications security

The ... International Conference on Distributed Computing Systems ,2000 ACM Conference on Computer and Communications Security ,2002 **Secure Composition of Untrusted Code** Peter Sewell,Jan Vitek,1999 Abstract We consider the problem of assembling concurrent software systems from untrusted or partially trusted off the shelf components using wrapper programs to encapsulate components and enforce security policies In previous work we introduced the box pi process calculus with constrained interaction to express wrappers and discussed the rigorous formulation of their security properties This paper addresses the verification of wrapper information flow properties We present a novel causal type system that statically captures the allowed flows between wrapped possibly badly typed components we use it to prove that a unidirectional flow wrapper enforces a causal flow property
