Simple Models Of Group Behavior:

Simple Models of Group Behavior Otomar J. Bartos, 1967 *Mathematical Modeling of Collective Behavior in Socio-Economic and Life Sciences* Giovanni Naldi, Lorenzo Pareschi, Giuseppe Toscani, 2010-08-12 Mathematical modeling using dynamical systems and partial differential equations is now playing an increasing role in the understanding of complex multi scale phenomena Behavior in seemingly different areas such as sociology economics and the life sciences can be described by closely related models Using examples from financial markets and modern warfare to the flocking of birds and the swarming of bacteria the collected research in this volume demonstrates the common methodological approaches and tools for modeling and simulating collective behavior The topics presented point toward new and challenging frontiers of applied mathematics making the volume a useful reference text for applied mathematicians physicists biologists and economists involved in the modeling of socio economic systems

Dynamic systems theory and embodiment in psychotherapy research. A new look at process and outcome Sergio Salvatore, Wolfgang Tschacher, Omar Carlo Gioacchino Gelo, Sabine C Koch, 2016-04-11 In an attempt to cease from reducing the world and its emergent phenomena to linear modeling and analytic dissection Dynamic Systems Theories DST and Embodiment theories and methods aim at accounting for the complex dynamic and non linear phenomena that we constantly deal with in psychology For instance DST and Embodiment can enrich psychology s understanding of the communicative process both in clinical and non clinical settings In psychotherapy an important amount of research has shown that next to other ingredients the therapeutic relationship is the most important active factor contributing to psychotherapy outcome These findings give communication a central role in the psychotherapy process In the traditional view the underlying model of understanding psychotherapy processes is that of a number of components summatively coming together enabling us to make a linear causal prediction Yet communication is inherently dynamic A shift to viewing the communication process in psychotherapy as a field dynamic phenomenon helps us to take into account nonlinear phenomena such as feedback processes within and between persons We thus propose an embodied enactive dynamic systems view as a new theoretical and methodological perspective that can more realistically capture what happens among and between two persons in psychotherapy This view reaches beyond the current narrow model of psychotherapy research DST and Embodied Enactive Approaches can offer

solutions to the loss of non linear phenomena the complex dynamics of reality and the holistic level of analysis DST and Embodied Enactive Approaches have developed not in a single discipline but in a joined movement based on various fields such as physics biology robotics anthropology philosophy linguistics neuroscience and psychology and have only recently entered clinical theorizing The two new paradigms have already triggered a rethinking of the therapeutic exchange by recognizing the embodied nature of psychological and communicative phenomena Their integration opens up a promising scenario in the field of psychotherapy research developing new profoundly transdisciplinary theoretical concepts methodologies and standards of knowledge The notion of field dynamics enables us to account for the role of the communicational context in the regulation of intra psychological processes while at the same time avoiding the pitfalls of an ontologization of the hierarchy of systemic organization Moreover the new approach implements methodological strategies that can transcend the conventional opposition between idiographic and nomothetic sciences

Basic Interests Frank R. Baumgartner, Beth L. Leech, 1998-03-23 A generation ago scholars saw interest groups as the single most important element in the American political system Today political scientists are more likely to see groups as a marginal influence compared to institutions such as Congress the presidency and the judiciary Frank Baumgartner and Beth Leech show that scholars have veered from one extreme to another not because of changes in the political system but because of changes in political science They review hundreds of books and articles about interest groups from the 1940s to today examine the methodological and conceptual problems that have beset the field and suggest research strategies to return interest group studies to a position of greater relevance The authors begin by explaining how the group approach to politics became dominant forty years ago in reaction to the constitutional legal approach that preceded it They show how it fell into decline in the 1970s as scholars ignored the impact of groups on government to focus on more quantifiable but narrower subjects such as collective action dilemmas and the dynamics of recruitment As a result despite intense research activity we still know very little about how groups influence day to day governing Baumgartner and Leech argue that scholars need to develop a more coherent set of research questions

focus on large scale studies and pay more attention to the context of group behavior Their book will give new impetus and direction to a field that has been in the academic wilderness too long **Toward a Practice of Autonomous Systems** Francisco J. Varela, Paul Bourguin, 1992-04-02 Artificial life embodies a recent and important conceptual step in modern science asserting that the core of intelligence and cognitive abilities is the same as the capacity for living The recent surge of interest in artificial life has pushed a whole range of engineering traditions such as control theory and robotics beyond classical notions of goal and planning into biologically inspired notions of viability and adaptation situatedness and operational closure These proceedings serve two important functions they address bottom up theories of artificial intelligence and explore what can be learned from simple models such as insects about the cognitive processes and characteristic autonomy of living organisms while also engaging researchers and philosophers in an exciting examination of the epistemological basis of this new trend Topics Artificial Animals Genetic Algorithms Autonomous Systems Emergent Behaviors Artificial Ecologies Immunologic Algorithms Self Adapting Systems Emergent Structures Emotion And Motivation Neural Networks Coevolution Fitness Landscapes Contributors H Bersini Domenico Parisi Rodney A Brooks Christopher G Langton S Kauffman J L Denenbourg Pattie Maes John Holland T Smithersm H Swefel H Muhlenbein Physics of Social Interactions Orit Peleg, Saad Bhamla, Alex Jordan, Tim Landgraf, Natasha Mhatre, Laura Ann Miller, 2022-11-08 Simple Models of Group Behaviour Otomar J. Goethals, 2012-12-06 In the fall of 1983 we began to organize a symposium entitled General Social Psychological Theories of Group Behavior Our goal was to encourage the extension and application of basic current social psychology to group behavior The symposium was presented in the spring of 1984 at the Eastern Psychological Association convention in Baltimore and the interest that it generated led to discussions with colleagues and friends about similar efforts by social psychologists eventually resulting in the present book Some clarification about the contents is in order First the theories presented here are clearly social psychological in scope and level of analysis as discussed in the Introduction Chapter 1 However we are not trying to encompass sociological anthropological political or historical theoretical approaches to group behavior Second while the theories comprise a wide ranging and representative if not quite exhaustive selection of social psychological theories of group behavior there are some interesting and general perspectives that are not represented For example one perspective that is conspicuous by its absence is some variant of learning theory Aside from the rare notable exception e g Buss 1979 little work currently is being done on group behavior from a learning theoretic perspective Our inclusion or exclusion of a theory reflects our judgment regarding
