Polymers in Conservation Norman S. Allen, M. Edge, Charles Velson Horie, 1992 Proceedings of an international conference organized by Manchester Polytechnic and Manchester Museum Manchester 17th 19th July 1991 t p verso

Handbook of Polymers in Paper Conservation Elisabetta Princi, 2011-10-31 This book describes the latest developments in paper conservation by using polymeric materials A short introduction on polymer chemistry is given to highlight the polymer characteristics and properties The book is then dedicated to the conservative problems and issues in the field of paper artworks This practical book identifies the importance of each type of polymer related to its nature and properties from the point of view of paper conservation With the help of schemes and tables the polymers are classified in terms of characteristics and final uses in respect to this very complex material **Polymers in Conservation**, 1991 Materials

for Conservation C V Horie, 2013-05-13 *Materials in Conservation* is the definitive introduction to the properties of materials used in conservation The continual struggle of conservators to ameliorate the deterioration of objects has led to increasing use of synthetic polymers These materials are part of the sophisticated technology that has been developed to augment and often replace traditional materials and methods Conservators therefore have a wider range of techniques available However they must be able to appreciate the potentials and pitfalls of any proposed technique The first section explains physical and chemical properties which are important in the conservation process i e application ageing reversal The topics covered include molecular weight glass transition temperature solubility and solvents polymerisation and degradation reactions The second section provides a detailed consideration of the individual materials current and obsolete used in conservation drawing out the factors relevant to their effects on objects The conservation uses of each material are summarised and referenced to allow further study In five appendices the properties of the polymers solvents and their interactions are tabulated with a list of suppliers and conversion table of physical units IUPAC and SI nomenclature is used throughout the book In this second edition this classic text is revised and updated to include modern materials such as cyclododecane and current ideas on adhesion consolidation and reversibility making *Materials in Conservation* the definitive source of vital information in the field This handy reference book should be on the bench of every conservator and available wherever objects from steam engines to dried plants are preserved *The Use of Synthetic Polymers in Conservation: an Annotated Bibliography*, 1976

Handbook of Polymers in Stone Conservation Elisabetta Princi, 2014-11-01 Dr Elisabetta Princi has wide experience regarding the use of polymers in the field of cultural heritage She has led a research team at the University of Genoa Genoa Italy for several years and has published widely on the scientific background to the conservation preservation and restoration of stone and stone based works of art This handbook is dedicated to the conservation of stone materials by the application of polymers A short introduction on polymer chemistry is given to highlight their characteristics and properties After the physical and chemical attributes of stone are summarised the problems related to its degradation

are discussed Finally the properties of the various polymers of potential value for stone restoration are reviewed and classified by schemes and tables and pointers for the future are suggested This handbook will be of great interest to those who share the author s enthusiasm for stone artworks and her dedication to their restoration and conservation *Polymers in Conservation*; N857667 N.S. Archaeological Conservation Using Polymers Chris Wayne Smith, 2003-01-08 Over the years archaeologists have developed a number of techniques for conserving historical artifacts for future generations Along with these techniques researchers have developed a series of ethical principles for treating materials in a way that allows them to be not only observed and analyzed for the present but also in re studied in the future Conservation techniques used up to now however have provided artifacts only a limited lifespan and in some cases they do not work well with water logged materials Within the past few years archaeological chemistry and concerns of longevity testing have become central issues in the development of conservation treatment strategies This problem became particularly acute when members of the Texas A M Nautical Archaeology Program were called on to conserve artifacts from La Belle the sunken ship of La Salle excavated in the 1990s off the coast of Texas by the Texas Historical Commission Entombed in the mud that sealed it from decay for over three centuries C Wayne Smith writes in his introduction the waterlogged hull and hundreds of thousands of fragile artifacts including brain matter in the skull of one unfortunate sailor would have been a futile conservation effort without new preservation technologies Working with Dow Corning Corporation Texas A M s Archaeological Preservation Research Lab APRL and the Conservation Research Lab CRL Smith and his colleagues in A M s Nautical Archaeology Program set out to develop a series of chemistries and techniques that would provide successful and affordable treatment strategies for organic materials In this ground breaking description of the processes and materials that were developed Smith explains these techniques in ways that will allow museums and historical societies to conserve more stable artifacts for traveling exhibits and interactive displays and will allow researchers to conserve new discoveries without sacrificing important information Beyond the advantages offered by polymer replacement Passivation Polymer technologies Smith considers a concept seldom addressed in conservation artistry Variance in equipment relative humidity laboratory layout intended results and level of expertise all affect researchers ability to obtain consistent and aesthetically correct samples and require a willingness to explore treatment parameters and combinations of polymers Smith prescribes an effective layout for day to day conservation of small organic artifacts and then examines some of the mechanical techniques used to process various organic materials from marine and land sites He concludes with an exploration of new tools and technologies that can help conservators devise more effective conservation strategies including CT scans and Computer Aided Design images and stereolithography All archaeologists conservators and museologists working with perishable artifacts will benefit from the careful explication of these new processes and those wishing to incorporate some or all of them will find the step by step instructions for doing so *Long-chain Polymers in Conservation*

Materials for Conservation Charles Velson Horie,1987 The first section explains physical and chemical properties that are important in the conservation process i e application aging reversal The topics covered include molecular weight glass transition temperature solubility and solvents polymerisation and degradation reactions The second section provides detailed consideration of the individual materials current and obsolete used in conservation drawing out the factors relevant to their effects on objects The conservation uses of each material are summarized and referenced to allow further study Publisher s description Conservation of Plastics Yvonne Shashoua,2012-06-25 Plastic objects are included more than ever in

museums and galleries collections these days but these items can start to deteriorate when they a just a few years old In this book Yvonne Shashoua provides the essential knowledge needed to keep plastic pieces in the best possible condition so that they can continue to be enjoyed for many years The historical development of plastics as well as the technology their physical and chemical properties identification degradation and conservation are all clearly and concisely covered within this single volume making it an invaluable reference for the increasing number of conservators and curators that are encountering plastics in their day to day work **Conservation of Severely Damaged Paper Using Passivation Polymers** Eloise

Eilert,2012 This work examined the use of passivation polymers in the conservation of severely damaged paper It specifically investigated the use of this functional polymer treatment to address the issues of damage to paper caused by waterlogging mold and internal acidity Several experiments were designed and conducted to examine the effects of the polymers in the conservation of papers compromised by these conditions Paper artifacts from the Bonfire Memorabilia Collection were selected and conserved using treatment protocols that included the use of the passivation polymers The conservation of some of the damaged papers from this culturally important site demonstrated the effectiveness of the polymer treatment in real world conservation situations This dissertation established that the use of passivation polymers adds strength and stability to severely damaged paper The Conservator's Cookbook Laura Chaillie,2024-12-30 The Conservator s Cookbook is a

collection of practical step by step guides outlining how to prepare various solutions adhesives gels and other mixtures used in heritage conservation While most conservators learn the chemical rationale of solution making during their training the actual process of preparing these compounds can be neglected or eventually forgotten This cookbook provides a non exhaustive and adaptable resource compiling practical recipes from across heritage conservation literature into a single volume Drawing from techniques used in furniture paper paintings textiles and other conservation specialisms each recipe in the Cookbook begins with a short summary of key chemical ideas before relating step by step instructions The solutions range from simple dissolutions adhesive resins to more complex cleaning systems utilising surfactants chelation agents and enzymes and gelled carriers Each recipe is followed with collections of technical data which help to bridge the gap between chemical understanding and practical application The Cookbook also provides important notes on health and safety and

laboratory best practice addressing some common misunderstandings and encouraging more sustainable approaches
Intended for the experienced professional and conservation student alike *The Conservator's Cookbook* is a crucial reference work that provides a starting point for practical experimentation and interaction between different conservation specialisms

Handbook of Archaeological Sciences D. R. Brothwell, A. M. Pollard, 2001-08-17 D R Brothwell and A M Pollard have got together to create the first large scale review of the many sciences which contribute to modern archaeology for over 30 years The *Handbook of Archaeological Sciences* is intended to bring together a substantial overview of the sciences in archaeology in one complete volume The book is organised under eight broad headings dating quaternary palaeoenvironments human palaeobiology developments in biomolecular archaeology resource exploitation archaeological prospection conservation science in the archaeological context and statistical and computer applications The contributors who are all well known in their own areas of expertise bring together in each chapter the basic science and the relevance of this science to the overall goal of archaeology understanding humans in the past This book is an invaluable source of reference for those interested in archaeology anthropology quaternary studies geography palaeoecology computing biology chemistry and physics those involved in commercial and local authority field archaeology units museums and archaeological organisations
