The Relations of Learning William Bennett Bizzell, 1934-01-01 **Learning Relationships in the Classroom** Dorothy Faulkner, Karen Littleton, Martin Woodhead, 2013-12-16 This reader explores the nature of interactions between children and their teachers in the classroom It emphasises the importance of such relationships for children s learning and for educational practice Part 1 looks at different cultural conceptions of the teacher learner relationship and how this relates to schooling cognitive development and the aquisition of knowledge Part 2 takes a closer look at the role of language and dialogue in interactions between adults and children in classrooms Part 3 describes research by developmental psychologists on peer interaction and collaborative learning and discusses how it has advanced our understanding of how children learn from each other Part 4 considers the implications of classroom based collaborative learning initiatives and the potential for creating communities of enquiry which change how we think about knowledge acquisition **Learning Relations (Routledge Revivals)** Doreen Grant, 2015-09-29 Learning Relations first published in 1989 describes the creation of a coherent learning environment in the inner city Combining the theory of international scholars such as Brofenbrenner Bruner Donaldson and Freire with practical experience Doreen Grant indicates the improvements in children s active learning when parents participate fully in the process of education *The Relations of Learning* William Bennett Bizzell, 1934 *The psychology of learning* Edward Lee Thorndike, 1913 *Inducing Event Schemas and Their Participants from Unlabeled Text* Nathanael William Chambers, 2011 The majority of information on the Internet is expressed in written text Understanding and extracting this information is crucial to building intelligent systems that can organize this knowledge but most algorithms focus on learning atomic facts and relations For instance we can reliably extract facts like Stanford is a University and Professors teach Science by observing redundant word patterns across a corpus However these facts do not capture richer knowledge like the way detonating a bomb is related to destroying a building or that the perpetrator who was convicted must have been arrested A structured model of these events and entities is needed to understand language across many genres including news blogs and even social media This dissertation describes a new approach to knowledge acquisition and extraction that learns rich structures of events e g plant detonate destroy and participants e g suspect target victim over a large corpus of news articles beginning from scratch and without human involvement As opposed to early event models in Natural Language Processing NLP such as scripts and frames modern statistical approaches and advances in NLP now enable new representations and large scale learning over many domains This dissertation begins by describing a new model of events and entities called Narrative Event Schemas A Narrative Event Schema is a collection of events that occur together in the real world linked by the typical entities involved I describe the representation itself followed by a statistical learning algorithm that observes chains of entities repeatedly connecting the same sets of events within documents The learning process extracts thousands of verbs within schemas from 14 years of newspaper data I present novel contributions in the eld

of temporal ordering to build classifiers that order the events and infer likely schema orderings I then present several new evaluations for the extracted knowledge Finally I apply Narrative Event Schemas to the field of Information Extraction learning templates of events with sets of semantic roles Most Information Extraction approaches assume foreknowledge of the domain s templates but I instead start from scratch and learn schemas as templates and then extract the entities from text as in a standard extraction task My algorithm is the first to learn templates without human guidance and its results approach those of supervised algorithms

Sustainability in Innovation and Entrepreneurship Antonio Leal-Millan, Marta Peris-Ortiz, Antonio L. Leal-Rodríguez, 2017-07-03 This book provides a richly illustrated study of sustainability innovation and entrepreneurship Specifically it examines the ways in which governmental policies and practices modify the social conditions necessary to promote innovation in businesses and by so doing impact economic development Exploring topics such as green innovation green customer capital smart cities green entrepreneurship and environmental responsibility this book presents some of the most current research and best practices in the field In today s global economy strategies policies and practices that address the negative effects of human activity on the environment need to be incorporated into the business framework in order for companies to achieve a sustainable competitive advantage Around the world such changes have already resulted in a broad range of products production methods and technical features that ensure environmental protection At the same time the mass media s communication of a deteriorating earth have motivated a growing number of citizens in both developed and developing nations to modify their consumption habits towards more ecological products Consequently an increasing number of companies are reacting to these changes in business and legal frameworks and consumer preferences by investing in new forms of green innovation or eco innovation designed to promote both environmental and corporate sustainability For example Hewlett Packard eliminated lead from its welding process Wal Mart reduced the emissions of their suppliers and Cisco Dell and IBM are investing in smart grids This volume showcases pioneering efforts among companies citizens and

government agencies that are moving from theory to practice by placing sustainability at the core of their development strategies

Relationship Marketing Re-Imagined Naresh K. Malhotra, Can Usay, Ahmet Bayraktar, 2016-04-15

Marketing is arguably amidst a paradigm shift. With the emerging value co-creation perspective, a single transaction can blossom to a process in which the customer and the marketer collaborate rather than negotiate for best total value through products, features, delivery terms, maintenance, and financing options for both B2B as well as B2C markets. Marketers increasingly need to develop and maintain long-term win-win relationships that extend beyond customers such as those with distributors, dealers, suppliers, competitors, and other external influencers. Business executives, marketing students, and those who are interested in learning about the transformative power of relationship marketing and CRM analytics in the business enterprise would highly benefit from reading this book.

Good Relationships in Schools Monika Platz, 2021-09-11

The relationship between teacher and student is an important element of school education and as such irreplaceable. If we want schools to be good places for those who teach and learn there, we must make sure that the educational relationships between teachers and students are good too. In research about school education, surprisingly little attention is paid to the normative dimension of the relationship between teacher and student. This lacuna points to a desideratum in the philosophy of education. More should be said about the normative structure of the teacher-student relationship, its role in teaching and learning, and its final value for teacher and student. Answering these fundamental philosophical questions is the core of this book. It offers a normatively rich concept of a good teacher-student relationship that is based on the analysis of two major relationship goods: trust and care. Moreover, the book explains the instrumental value of a good educational relationship for the student's achievement of epistemic aims of school education as well as the final value of such a relationship for teacher and student.
