Persons, Interests, and Justice Nils Holtug, 2010-04-22 In our lives we aim to achieve welfare for ourselves that is to live good lives But we also have another more impartial perspective where we aim to balance our concern for our own welfare against a concern for the welfare of others This is a perspective of justice Nils Holtug examines these two perspectives and the relations between them The first part of the book is concerned with prudence more precisely with what the necessary and sufficient conditions are for having a self interest in a particular benefit It includes discussions of the extent to which self interest depends on preferences personal identity and what matters in survival It also considers the issue of whether it can benefit or harm a person to come into existence and what the implications are for our theory of self interest A prudential view is defended according to which a person has a present self interest in a future benefit if and only if she stands in a relation of continuous physical realization of appropriate psychology to the beneficiary where the strength of the self interest depends both on the size of the benefit and on the strength of this relation The second part of the book concerns distributive justice and so how to distribute welfare or self interest fulfilment over individuals It includes discussions of welfarism egalitarianism and prioritarianism population ethics the importance of personal identity and what matters for distributive justice and the importance of all these issues for various topics in applied ethics including the badness of death Here a version of prioritarianism is defended according to which roughly the moral value of a benefit to an individual at a time depends on both the size of the benefit and on the individual's self interest at that time in the other benefits that accrue to her at this and other times *Cyclical Movements in the balance of payments* Tse Chun Chang, **Adaptive**

Potentiality John P. Lizza, 2014-02-15 Classic articles and newly commissioned chapters analyze the nature of potentiality in bioethics What is the moral status of humans lacking the potential for consciousness The concept of potentiality often tips the scales in life and death medical decisions Some argue that all human embryos have the potential to develop characteristics such as consciousness intellect and will that we normally associate with personhood Individuals with total brain failure or in a persistent vegetative state are thought to lack the potential for consciousness or any other mental function Or do they In Potentiality John Lizza gathers classic articles alongside newly commissioned chapters from leading thinkers who analyze the nature of potentiality in bioethics a concept central to a number of important debates The contributors illustrate how considerations of potentiality and potential persons complicate the analysis of the moral consideration of persons at the beginning and end of life A number of works explicitly uncover the Aristotelian background of the concept while others explore philosophical issues about persons dispositions and possibility The common assumption that potentiality is intrinsic to whatever has the potentiality is challenged by a relational view of persons an extrinsic account of dispositions and attention to how extrinsic factors affect realistic possibilities Although potentiality has figured prominently in bioethical literature it has not received a great deal of logical semantic and metaphysical analysis in contemporary philosophical literature This collection will bring these thorny philosophical issues to the fore Incorporating cutting edge research on the topic of potentiality this thought provoking collection will interest bioethicists philosophers health care professionals attorneys engaged in medical and health issues and hospital and governmental committees who advise on policy and law concerning issues at the beginning and end of life

Estimating How the Macroeconomy Works Ray C. FAIR, Ray C Fair, 2009-06-30 Macroeconomics tries to describe and explain the economywide movement of prices output and unemployment The field has been sharply divided among various schools including Keynesian monetarist new classical and others It has also been split between theorists and empiricists Ray Fair is a resolute empiricist developing and refining methods for testing theories and models The field cannot advance without the discipline of testing how well the models approximate the data Using a multicountry econometric model he examines several important questions including what causes inflation how monetary authorities behave and what are their stabilization limits how large is the wealth effect on aggregate consumption whether European monetary policy has been too restrictive and how large are the stabilization costs to Europe of adopting the euro He finds among other things little evidence for the rational expectations hypothesis and for the so called non accelerating inflation rate of unemployment NAIRU hypothesis He also shows that the U S economy in the last half of the 1990s was not a new age economy
