Molecular Basis Of Nk Cell Recognition And Function:

Human B Cell Populations Manlio Ferrarini, Federico Caligaris-Cappio, 1997-01-01 B cells used to be considered as a homogeneous population of cells destined to produce antibodies of increasing affinity and to maintain an immunological memory In recent years it has been determined that B cells can be subdivided into different subsets characterized by distinct morphologic phenotypic and functional features Presenting results of research work on the definition of B cell subset populations this book explains the basic mechanisms that control B cell activation stimulation and regulation Articles include studies on both normal and malignant B cells and describe the mechanisms underlying T B cell interactions during the immune response The most important advances in the field of immunodeficiency are also reported This volume will be essential not only for basic and clinical immunologists but also for hematologists pathologists and rheumatologists with a special interest in the pathogenesis of lymphoproliferative or autoimmune disorders

Molecular Basis of NK Cell Recognition and Function L. Moretta, 1996 Natural killer NK cells have been the subject of intense investigation Only in recent years however could the molecular mechanisms by which they lyse tumor or virus infected cells but spare normal cells be elucidated NK cells express different specialized receptors NK R specific for major histocompatibility complex MHC class I molecules These MHC molecules exert an inhibitory effect on NK cells i e lack of expression of one or more MHC class I alleles a common event in tumor or virus infected cells leads to NK mediated target cell lysis Recently NK type receptors have also been identified in a subset of T lymphocytes MHC NK R interaction causes inhibition of T cell activation and functions an observation which suggests a role for these receptors in the negative control of T cell responses This volume offers a complete and updated review of the signal transduction and functions of NK cells as well as their roles in transplantation anti tumor response and infectious diseases Written by experienced investigators who have contributed significantly to progress in the field this collection of reviews will be a valuable resource for basic and clinical immunologists hematologists oncologists and virologists

Cellular Physiology and Biochemistry, 1997 [Hematopoietic Stem Cells VI, Volume 1106](#) Lothar Kanz, 2007-07-23 Stem cell research holds great promise for therapeutic applications This rapidly advancing field is the focus of the biennial international symposium and workshop whose proceedings are contained within this volume The major topics covered are stem cell function including self renewal survival migration and regulation the stem cell niche stem cell fate as lineage commitment takes place malignant hematopoiesis hematopoiesis regulators and embryonic stem cells and plasticity As with previous volumes in this unique series of proceedings it is hoped that further cooperation and collaborative projects will be generated by disseminating these presentations widely NOTE Annals volumes are available for sale as individual books or as a journal For information on institutional journal subscriptions please visit www.blackwellpublishing.com nyas ACADEMY MEMBERS Please contact the New York Academy of Sciences directly to place your order www.nyas.org Members of the New York Academy of Science receive full text access to the Annals online

The Molecular Basis of Blood Diseases George Stamatoyannopoulos,2001 The superb Third Edition of this popular text covers all the recent groundbreaking developments which have taken place in this field Comprehensively revised it presents all the latest findings on the molecular bases of blood cell functions and disease mechanisms and the impact of these discoveries on the state of medicine This edition includes new chapters such as signaling and antigen presentation by B lymphocytes molecular oncogenesis and more

The Molecular Basis of Cancer John Mendelsohn,2001 The state of the art 2nd Edition of this acclaimed reference explains the principles that form the scientific basis for our understanding of malignant transformation and the pathogenesis and treatment of cancer Readers will find a broad update on the scientific principles of new diagnostic tests and therapeutic interventions now being used in clinical trials and practice Incorporating the latest advances and newest research this text also gives thorough descriptions of everything from the basic mechanisms of malignant cells and molecular abnormalities in common cancers to new approaches for cancer therapy Each chapter discusses the clinical implications for treatment Numerous examples of the latest clinical interventions help readers understand and assess the products of the biotechnology revolution

Anticancer Research ,1997

Current Topics in Microbiology and Immunology Klas Kärre,1967 Our understanding of the function of natural killer NK cells has dramatically changed in recent years The discovery of NK receptors specific for MHC class I molecules and the study of the role of co stimulatory and adhesion molecules have led to an understanding of how NK cells recognize tumor and virally infected cells that have lost expression of MHC class I molecules or have altered distribution of normal cell surface molecules Such recognition events lead to intracellular signals which can be either stimulatory or inhibitory This book provides an insight into how NK cells develop how they learn to distinguish altered cells from normal cells and into their biological role in controlling infections and tumors

MHC Antigens and NK Cells Rafael Solana,1994 This book focuses on the role of the Major Histocompatibility Complex MHC class 1 antigens in the function of NK cells It has been suggested that NK cell cytolytic triggering is facilitated by lack of MHC expression in the target cells This missing self hypothesis has been postulated based on studies establishing that MHC class 1 molecules of the target and the host can influence NK reactivity against certain normal and malignant cells
