Molecular Modeling Applications in Crystallization Allan S. Myerson, 1999-06-28 The first book to introduce molecular modeling and its applications in crystallization written by leading experts in the field **Molecular Modeling for the Design of Novel Performance Chemicals and Materials** Beena Rai, 2012-03-23 Molecular modeling MM tools offer significant benefits in the design of industrial chemical plants and material processing operations While the role of MM in biological fields is well established in most cases MM works as an accessory in novel products materials development rather than a tool for direct innovation As a result MM engineers and *Reviews in Computational Chemistry, Volume 17* Kenny B. Lipkowitz, Donald B. Developments Jan H. Noordik,2004 The developments in information technology in the last decades of the 20th century have fundamentally changed the way in which scientific information is being communicated and used A scientific discipline where the impact of these changes has been particularly significant is bio chemistry Up to less than 25 years ago molecular modeling was a hardly existent computational chemistry niche only practiced at those few institutes that could afford the very expensive specialised hardware Also rapid access to not only the primary literature but possibly even more importantly to the factual primary data about millions of chemical compounds to reactions structures and spectra and to the genomic data of various organisms including humans can only be provided by digital storage and retrieval techniques This book seeks to document some key developments in computerized chemical information in the last two decades of the past century To put the developments into a historic perspective the three opening chapters present review articles on the founding the history and the operation of three different representative European computer chemistry institutes These introductory chapters are personal accounts of history and development and clearly show the different approaches and aims in setting up these academic research and or service facilities for computer aided chemistry and cheminformatics The following chapters form a bridge to recent cheminformatics research by covering selected topics in the fields of organic synthesis drug design crystallography modeling and chemistry teaching *Crystal Growth of Organic Materials* Allan S. Myerson,Daniel A. Green,Paul Meenan,1996 Examines emerging technologies in the use of crystallization as a purification and separation process in the food pharmaceutical and commodity and specialty chemical industries Discusses the application of molecular modelling and calculation chemistry to crystallization Includes chapters focusing on crystal morphology and chirality

Cellulose Chemistry and Technology ,1998 *Chemical Applications of Molecular Modelling* Jonathan M. Goodman,1998 This book explores the molecular modeling enabling the nonspecialist to appreciate the power as well as the limitations of the computational tools available and giving a background to the methods used and how they were developed It also provides examples of how molecular modeling has been used to address chemical questions commonly asked by the experimental chemist and includes practical examples and case studies 143 illus **D-Xylitol** Silvio Silvério da Silva,Anuj Kumar Chandel,2012-10-02 Commercially D xylitol is produced by chemical reactions that are tailored to the requirements of various sectors However due to the rising interest in sustainable development and ecologically benign practices microbial

transformation processes are generally preferred over the conventional chemical conversion process. The former have multiple advantages including less chemical load on the environment, higher efficiency, and the ability to dilute multiple downstream transformation attempts while maintaining product yield and recovery. This book aims to disseminate the most current advances in the biotechnological production of D xylitol and its applications in medical and health care. It is a unique collection of 15 book chapters split into 5 sections and written by experts in their respective fields who present critical insights into several topics, review current research, and discuss future progress in this area. This book also provides essential information on hemicellulose hydrolysis to recover D xylose, detoxification of hemicellulose hydrolysates, and improved fermentation methods for increased D xylitol production. The highlights of strain improvement to increase the D xylitol titers and downstream recovery of D xylitol are also discussed in several sections. The current applications of D xylitol in medical and health care have been used to justify the cost incurred for setting up the demonstration plant for D xylitol production in the market. Apart from researchers and post graduate students in the field of microbial biotechnology, this book will assist those in the business community who deal with the economic analysis of bio based products and their marketing.

Forthcoming Books Rose Arny, 1999 **Handbook of Polymer Crystallization** Ewa Piorkowska, Gregory C.

Rutledge, 2013-07-01. Polymeric crystals are more complex in nature than other materials, crystal structures due to significant structural disorder present. The only comprehensive reference on polymer crystallization. Handbook of Polymer Crystallization provides readers with a broad in depth guide on the subject covering the numerous problems encountered during crystallization as well as solutions to resolve those problems to achieve the desired result. Edited by leading authorities in the field, topics explored include neat polymers, heterogeneous systems, polymer blends, polymer composites, orientation induced crystallization, crystallization in nanocomposites, and crystallization in complex thermal processing conditions. **Chemistry and Industry**, 2000 Relationship Between Crystal Structure and Solid-state Properties of Pharmaceuticals Agam R. Sheth, 2004 Encyclopedia of Separation Science Michael Cooke, C. F. Poole, 2000 *Molecular Modeling of Polymer Crystallization and the Effect of Nucleating Agents* Alexander Jules Bourque, 2017. The microstructure in a semicrystalline polymer material ultimately determines its material properties. Despite the abundance of research into the semicrystalline microstructure and its evolution during crystallization, a clear description of its development remains elusive. The advent of advanced computing and algorithms, however, have promoted molecular modeling of polymer crystallization, providing a new perspective on the development of the microstructure. This thesis revisits and challenges many aspects of microstructural development in macromolecular materials by applying new modeling techniques and recent technologies. Through atomistic simulations of n-alkane crystallization, this thesis presents new molecular evidence of surface nucleation processes that contribute to the propagation of the crystal growth front in a macromolecular system. Crystallization in polymeric systems has long been theorized to proceed by secondary nucleation. In this work, molecular dynamics (MD)

simulations were engineered to probe this surface nucleation process by systematically inducing crystal growth for a system of macromolecules. In a novel application of mean first passage time analysis, the critical surface nucleus sizes, waiting times, and surface nucleation rates were extracted from atomically detailed molecular trajectories using a layer-by-layer approach. Insight from MD simulations was used to build a new kinetic model to describe the structure and rate of advancement of the growth front during crystallization. In the model, solidification occurs through the mechanisms of surface nucleation and lateral spreading of the solid phase within layers in the vicinity of the growth front. Transformation within each layer is described by an equation similar to the two-dimensional variant of the Johnson-Mehl-Avrami equation. The kinetic model is computationally efficient and predictive of important macroscopic observables. Finally, this thesis presents the first computational screening of nucleating agents for macromolecular crystallization. Screens were conducted for two families of crystal materials: tetrahedrally coordinated materials isomorphous to diamond and silicon, and 2D hexagonally coordinated materials isomorphous to graphene. The induction time for heterogeneous nucleation was shown to depend strongly on crystallographic registry between the nucleating agent and the critical nucleus, but the severity of this registry requirement weakened with increasing strength of attraction to the surface of the nucleating agent. In an unprecedented finding, the substrate rigidity significantly influenced heterogeneous nucleation. The molecular organization of n-alkane chains at the nucleating surface was also investigated to build a fundamental understanding of the mechanisms for heterogeneous nucleation and spreading.

Molecular Modeling of Inorganic Compounds Peter Comba, Trevor W. Hambley, 1995-09-13 An introduction to the field of molecular modelling of inorganic compounds which should be of interest to medicinal inorganic coordination and theoretical chemists.
