Real Fatou Conjecture:

The Real Fatou Conjecture Jacek Graczyk, Grzegorz Świątek, 2014-09-08 In 1920 Pierre Fatou expressed the conjecture that except for special cases all critical points of a rational map of the Riemann sphere tend to periodic orbits under iteration. This conjecture remains the main open problem in the dynamics of iterated maps. For the logistic family $x_{n+1} = ax_n(1-x_n)$ it can be interpreted to mean that for a dense set of parameters an attracting periodic orbit exists. The same question appears naturally in science where the logistic family is used to construct models in physics, ecology, and economics. In this book Jacek Graczyk and Grzegorz Świątek provide a rigorous proof of the Real Fatou Conjecture. In spite of the apparently elementary nature of the problem, its solution requires advanced tools of complex analysis. The authors have written a self-contained and complete version of the argument accessible to someone with no knowledge of complex dynamics and only basic familiarity with interval maps. The book will thus be useful to specialists in real dynamics as well as to graduate students. **Annals of Mathematics Studies** Jacek Graczyk, Grzegorz Świątek, 1940 *Inverse Images and the Real Fatou Conjecture* Valentina Dragan, 2000 *Abel Prize 2018-2022* Helge Holden, Ragni Piene, 2024-04-25 The book presents the winners of the Abel Prize in mathematics for the period 2018-2022: Robert P. Langlands (2018), Karen K. Uhlenbeck (2019), Hillel Furstenberg and Gregory Margulis (2020), L. Szilard and Avi Wigderson (2021), and Dennis P. Sullivan (2022). The profiles feature autobiographical information as well as a scholarly description of each mathematician's work. In addition, each profile contains a Curriculum Vitae, a complete bibliography, and the full citation from the prize committee. The book also includes photos from the period 2018-2022 showing many of the additional activities connected with the Abel Prize. This book follows on *The Abel Prize 2003-2007: The First Five Years* (Springer, 2010) and *The Abel Prize 2008-2012* (Springer, 2014) as well as on *The Abel Prize 2013-2017* (Springer, 2019) which profile the previous Abel Prize laureates. **Handbook of Dynamical Systems** A. Katok, B. Hasselblatt, 2005-12-17 This second half of Volume 1 of this Handbook follows Volume 1A which was published in 2002. The contents of these two tightly integrated parts taken together come close to a realization of the program formulated in the introductory survey *Principal Structures* of Volume 1A. The present volume contains surveys on subjects in four areas of dynamical systems: Hyperbolic dynamics, parabolic dynamics, ergodic theory, and infinite dimensional dynamical systems, partial differential equations. Written by experts in the field, the coverage of ergodic theory in these two parts of Volume 1 is considerably more broad and thorough than that provided in other existing sources. The final cluster of chapters discusses partial differential equations from the point of view of dynamical systems. **Handbook of Dynamical Systems** B. Hasselblatt, A. Katok, 2002-08-20 Volumes 1A and 1B. These volumes give a comprehensive survey of dynamics written by specialists in the various subfields of dynamical systems. The presentation attains coherence through a major introductory survey by the editors that organizes the entire subject and by ample cross references between individual surveys. The volumes are a valuable resource for dynamicists seeking to acquaint themselves with other specialties in the

field and to mathematicians active in other branches of mathematics who wish to learn about contemporary ideas and results dynamics Assuming only general mathematical knowledge the surveys lead the reader towards the current state of research in dynamics Volume 1B will appear 2005

Research Problems in Function Theory Walter K. Hayman, Eleanor F. Lingham, 2019-09-07 In 1967 Walter K Hayman published Research Problems in Function Theory a list of 141 problems in seven areas of function theory In the decades following this list was extended to include two additional areas of complex analysis updates on progress in solving existing problems and over 520 research problems from mathematicians worldwide It became known as Hayman s List This Fiftieth Anniversary Edition contains the complete Hayman s List for the first time in book form along with 31 new problems by leading international mathematicians This list has directed complex analysis research for the last half century and the new edition will help guide future research in the subject The book contains up to date information on each problem gathered from the international mathematics community and where possible suggests directions for further investigation Aimed at both early career and established researchers this book provides the key problems and results needed to progress in the most important research questions in complex analysis and documents the developments of the past 50 years

Complex Analysis and Dynamics in One Variable with Applications Luis T. Magalhães, 2025-05-26 This textbook has been designed to support the initial study of Complex Analysis progressing to Complex Dynamics It focuses on the fundamental aspects of one variable complex functions covering the geometric theory and dynamics of iterations of rational mappings Following the standard material the book delves into an extensive range of advanced topics encompassing the requirements for a one year graduate level course or a preliminary exam In this work the reader will discover three distinctive characteristics it simplifies and unifies ideas and concepts that might appear disparate or complicated in real analysis it contributes to the development of other areas in mathematics and it showcases relevance for applications in Science and Engineering with many exercises Historical notes throughout the text help to contextualize the theory With its flexible structure this textbook provides a solid foundation for a first course in Complex Analysis and for a second more advanced course establishing a robust basis for subsequent studies
