## **Macrotransport Processes:**

*Macrotransport Processes* Howard Brenner, 2013-10-22 This unique book the first published on the subject provides an introduction to the theory of macrotransport processes a comprehensive effective medium theory of transport phenomena in heterogeneous systems The text begins with a relatively simple approach to the basic theory before turning to a more formal theoretical treatment which is extended in scope in each successive chapter Many detailed examples as well as questions appearing at the end of each chapter are included to demonstrate the practical implementation of the theory *Macrotransport Processes* is aimed at an audience already familiar with conventional theories of transport phenomena This audience especially includes graduate students in chemical mechanical and civil engineering departments as well as applied mathematicians biomechanicists and soil physics particularly those with interests in problems of flow and dispersion in porous media

**Adsorption Calculations and Modelling** Howard Brenner, 2013-10-22 *Adsorption Calculations and Modelling* provides readers with practical useful information about how to make adsorption calculations and formulate models describing adsorption processes Unlike most books on this subject this book treats both gas phase adsorption and liquid phase adsorption with equal emphasis and supplies a rigorous treatment of multi component adsorption It also covers adsorption applications in environmental applications including the use of impregnated adsorbents for protection against toxic gases and carbon adsorption in water and wastewater treatment Explores the most up to date information on multicomponent adsorption Details adsorption applications in environmental application Explains the fundamentals of adsorption calculation in a simple straightforward manner

**Environmental Systems and Processes** Walter J. Weber, 2001 A rigorous and in depth approach to environmental systems and processes Concern over environmental changes resulting from oversubscription and exploitation of Earth's resources is mounting Acid rains from power generation and industrial process emissions to the atmosphere contamination of water resources by spills and discharges of hazardous chemicals the greenhouse and global warming effects of carbon dioxide generated by consumption of organic fuels and the depletion of ecosystem stabilizers such as oxygen in lakes and streams overfertilized by human wastes these are a few of the considerations facing environmental engineers and scientists today These are complex and confounding processes and phenomena and their effects vary widely among the virtually limitless number of environmental systems and subsystems on Earth *Environmental Systems and Processes Principles Modeling and Design* is the first book to explain that although environmental systems are virtually limitless in number change is controlled by a relatively small set of fundamental processes Written by one of the initiators and foremost proponents of the first principles approach to environmental system characterization and problem solving this informative volume details how three fundamental issues lie at the base of every environmental process i.e. the amount and form of available energy the rate at which that energy can be exercised and the configuration and dynamics of the system in which the process occurs The author demonstrates how the mastering of

relatively few fundamental principles can provide the reader with the tools necessary to solve a broad range of environmental problems Topics discussed in Environmental Systems and Processes Principles Modeling and Design include fluid flow and mass transport passive and reactive interphase mass transfer elementary and complex process rates ideal hybrid and nonideal system modeling and design and multiphase and interfacial process dynamics and design The unique and highly effective format of presenting several simple but essential fundamentals first followed by detailed illustrative examples and explanations of how these principles describe various complex specific environmental systems and processes makes Environmental Systems and Processes Principles Modeling and Design a requisite for environmental sciences and engineering classrooms and a staple for the bookshelves of all environmental professionals **Eli Ruckenstein D.**

Shafer,2012-12-06 Masters Theses in the Pure and Applied Sciences was first conceived published and disseminated by the Center for Information and Numerical Data Analysis and Synthesis CINDAS at Purdue University in 1957 starting its coverage of theses with the academic year 1955 Beginning with Volume 13 the printing and dissemination phases of the activity were transferred to University Microfilms Xerox of Ann Arbor Michigan with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volumes were handled by an international publishing house to assure improved service and broader dissemination Hence starting with Volume 18 Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York and in the same year the coverage was broadened to include Canadian universities All back issues can also be ordered from Plenum We have reported in Volume 39 thesis year 1994 a total of 13 953 thesis titles from 21 Canadian and 159 United States universities We are sure that this broader base for these titles reported will greatly enhance the value of this important annual reference work While Volume 39 reports theses submitted in 1994 on occasion certain universities do report theses submitted in previous years but not reported at the time **Memorial Tributes** National Academy of Engineering,2015-10-06 This is the 19th Volume in the series Memorial Tributes compiled by the National Academy of Engineering as a personal remembrance of the lives and outstanding achievements of its members and foreign associates These volumes are intended to stand as an enduring record of the many contributions of engineers and engineering to the benefit of humankind In most cases the authors of the tributes are contemporaries or colleagues who had personal knowledge of the interests and the engineering accomplishments of the deceased Through its members and foreign associates the Academy carries out the responsibilities for which it was established in 1964 Under the charter of the National Academy of Sciences the National Academy of Engineering was formed as a parallel organization of outstanding engineers Members are elected on the basis of significant contributions to

engineering theory and practice and to the literature of engineering or on the basis of demonstrated unusual accomplishments in the pioneering of new and developing fields of technology The National Academies share a responsibility to advise the federal government on matters of science and technology The expertise and credibility that the National Academy of Engineering brings to that task stem directly from the abilities interests and achievements of our members and foreign associates our colleagues and friends whose special gifts we remember in this book

Fractures and Fracture Networks P.M. Adler, J.-F. Thovert, 1999-03-31 Both the beauty and interest of fractures and fracture networks are easy to grasp since they are abundant in nature An example is the road from Digne to Nice in the south of France with an impressive number and variety of such structures the road for the most part goes through narrow valleys with fast running streams penetrating the rock faces erosion is favored by the Mediterranean climate so that rocks are barely covered by meager vegetation In this inhospitable and sterile landscape the visitor can immediately discover innumerable fractures in great masses which have been distorted by slow yet powerful movements This phenomenon can be seen for about 100 kilometers all kinds of shapes and combinations are represented and can be observed either in the mountain itself or in the man made cliffs and excavations resulting from improvements made to the road In the same region close to the Turini Pass a real large scale hydrodynamic experiment is taking place a source which is situated on the flank on the mountain has been equipped with a tap if the tap is open water flows through the tap only but when it is closed then the side of the mountain releases water in a matter of seconds Other outlets are also influenced by this tap such as a water basin situated a few hundred meters away
