Nuclear Fusion:

Nuclear Fusion Keishiro Niu, 2009-06-18 Nuclear Fusion describes the state and ultimate goals of nuclear fusion research. The book concentrates on the energy problem in the near future, the role of nuclear fusion reactions for a solution of the energy problem, the requirements for releasing fusion energy, and the methods likely to lead to fusion reactions. The book is organized into four sections. In turn, these cover the fundamentals of nuclear fusion, methods of magnetic confinement, methods of inertial confinement, and the fusion reactor itself. The book has a strong theoretical content covering those areas of plasma physics which are necessary for an understanding of the confinement problem. This book was first published in Japanese. This edition in English has been thoroughly revised by Keishiro Niu.

Systems Approaches to Nuclear Fusion Reactors Frederick B. Marcus, 2023-01-01 This book offers an overall review applying systems engineering and architecture approaches of the design, optimization, operation, and results of leading fusion experiments. These approaches provide a unified means of evaluating reactor design. Methodologies are developed for more coherent construction or evaluation of fusion devices, associated experiments, and operating procedures. The main focus is on tokamaks, with almost all machines and their important results being integrated into a systems design space. Case studies focus on DIII-D, TCV, JET, WEST, the fusion reactor prototype ITER, and the EU DEMO concept Stellarator. Mirror and Laser inertial confinement experiments are similarly analysed, including reactor implications of breakeven at NIF. The book examines the engineering and physics design and optimization process for each machine, analysing their performance and major results achieved, thus establishing a basis for the improvement of future machines. The reader will gain a broad historical and up-to-date perspective of the status of nuclear fusion research from both an engineering and physics point of view. Explanations are given of the computational tools needed to design and operate successful experiments and reactor-relevant machines. This book is aimed at both graduate students and practitioners of nuclear fusion science and engineering, as well as those specializing in other fields demanding large and integrated experimental equipment. Systems engineers will obtain valuable insights into fusion applications. References are given to associated complex mathematical derivations which are beyond the scope of this book. The general reader interested in nuclear fusion will find here an accessible summary of the current state of nuclear fusion.

Star Power Alain Bécoulet, 2023-09-19 A concise and accessible explanation of the science and technology behind the domestication of nuclear fusion energy. Nuclear fusion research tells us that the Sun uses one gram of hydrogen to make as much energy as can be obtained by burning eight tons of petroleum. If nuclear fusion, the process that makes the stars shine, could be domesticated for commercial energy production, the world would gain an inexhaustible source of energy that neither depletes natural resources nor produces greenhouse gases. In *Star Power*, Alan Bécoulet offers a concise and accessible primer on fusion energy, explaining the science and technology of nuclear fusion and describing the massive international scientific effort to achieve commercially viable fusion energy. Bécoulet draws on his work as Head of Engineering at ITER International.

Thermonuclear Experimental Reactor to explain how scientists are trying to put the sun in a box He surveys the history of nuclear power beginning with post World War II efforts to use atoms for peaceful purposes and describes how energy is derived from fusion explaining that the essential principle of fusion is based on the capacity of nucleons protons and neutrons to assemble and form structures atomic nuclei in spite of electrical repulsion between protons which all have a positive charge He traces the evolution of fusion research and development mapping the generation of electric current through fusion The ITER project marks a giant step in the development of fusion energy with the potential to demonstrate the feasibility of a nuclear fusion reactor Star Power offers an introduction to what may be the future of energy production

Nuclear Fusion Research Robert E. H. Clark, Detlev Reiter, 2006-01-20 It became clear in the early days of fusion research that the effects of the containment vessel erosion of impurities degrade the overall fusion plasma performance Progress in controlled nuclear fusion research over the last decade has led to magnetically confined plasmas that in turn are sufficiently powerful to damage the vessel structures over its lifetime This book reviews current understanding and concepts to deal with this remaining critical design issue for fusion reactors It reviews both progress and open questions largely in terms of available and sought after plasma surface interaction data and atomic molecular data related to these plasma edge issues

Nuclear Fusion Sharon Ann Holgate, 2022-09-01 Holgate guides us expertly and with a deft touch along the journey towards the holy grail of unlimited energy for all JIM AL KHALILI What is nuclear fusion In clear and accessible language this book explains the basics and the hope for the future A valuable addition to the Hot Science series JOHN GRIBBIN Could the Sun hold the key to a future of clean energy Since the 1950s scientists have attempted to harness nuclear fusion the process that creates the Sun's energy to generate near limitless amounts of electricity But the fact that we still have no fusion power plants is testament to the complexities of the challenge Now the deepening climate crisis means that researchers around the world are in a race to create a mini Sun here on Earth The glittering prize is an energy source that emits no greenhouse gases and could solve energy equity and supply issues at a stroke Sharon Ann Holgate a former Young Professional Physicist of the Year tells the compelling story of the ongoing scientific quest for a revolutionary new era of green energy production

The Fairy Tale of Nuclear Fusion L. J. Reinders, 2021-05-20 This carefully researched book presents facts and arguments showing beyond a doubt that nuclear fusion power will not be technically feasible in time to satisfy the world's urgent need for climate neutral energy The author describes the 70 year history of nuclear fusion the vain attempts to construct an energy generating nuclear fusion power reactor and shows that even in the most optimistic scenario nuclear fusion in spite of the claims of its proponents will not be able to make a sizable contribution to the energy mix in this century whatever the outcome of ITER This implies that fusion power will not be a factor in combating climate change and that the race to save the climate with carbon free energy will have been won or lost long before the first nuclear fusion power station comes on line Aimed at the general public as well as those whose decisions directly affect energy policy this book will be a valuable resource for informing future debates
