Loop Transfer Recovery Ali Saberi, Ben M. Chen, Peddapullaiah Sannuti, 1993 *Synchronization of Multi-Agent Systems in the Presence of Disturbances and Delays* Ali Saberi, Anton A. Stoorvogel, Meirong Zhang, Peddapullaiah Sannuti, 2022-01-18 This monograph explores the synchronization of large scale multi agent dynamical systems in the presence of disturbances delays and time varying networks Drawing upon their extensive work in this area the authors provide a thorough treatment of agents with higher order dynamics different classes of models for agents and the underlying networks representing the agents actions The high technical level of their presentation and their rigorous mathematical approach make this a timely and valuable resource that will fill a gap in the existing literature Divided into two sections the first part of the book focuses on state synchronization of homogeneous multi agent systems The authors consider state synchronization by determining control strategies for both continuous and discrete time systems that achieve state synchronization under both full and partial state coupling The chapters that follow examine multi agent systems with both linear and nonlinear time varying agents input delays for continuous and discrete time systems and communication delays for continuous time systems The second part of the book is dedicated to regulated output synchronization of heterogeneous multi agent systems with linear and nonlinear agents Both sections of the book include performance considerations in H_2 and H_∞ norms in the presence of external disturbances Research on synchronization of multi agent systems has been growing in popularity and is highly interdisciplinary with applications to automobile systems aerospace systems multiple satellite GPS and high resolution satellite imagery aircraft formations highway traffic platooning industrial process control with multiple processes and more Synchronization of Multi Agent Systems in the Presence of Disturbances and Delays will therefore be of interest to upper level graduate students researchers and engineers in industry working on interconnected dynamical systems *Internal and External Stabilization of Linear Systems with Constraints* Ali Saberi, Anton A. Stoorvogel, Peddapullaiah Sannuti, 2012-06-21 Unifying two decades of research this book is the first to establish a comprehensive foundation for a systematic analysis and design of linear systems with general state and input constraints For such systems which can be used as models for most nonlinear systems the issues of stability controller design additional constraints and satisfactory performance are addressed The book is an excellent reference for practicing engineers graduate students and researchers in control systems theory and design It may also serve as an advanced graduate text for a course or a seminar in nonlinear control systems theory and design in applied mathematics or engineering departments Minimal prerequisites include a first graduate course in state space methods as well as a first course in control systems design
