development of the Caribbean region *Theoretical and Empirical Exercises in Econometrics* Nlandu Mamingi, 2005 This is a textbook designed for undergraduate and graduate students and is the result of the author's more than twenty years of involvement with econometrics as both teacher and researcher. It contains theory problems and answers many of which have already been tested extensively in classrooms and tutorials and then refined for the book. It includes the following topics: single equation regressions, dummy and limited dependent variable models, simultaneous equations models, dynamic regression models, unit roots, cointegration and error correction models, aggregation over time, issues forecasting and panel data models. The book does not attempt to duplicate the many standard econometrics books. Rather, it supplements them by focusing exclusively on theoretical and empirical exercises in a systematic way. Although much of the material has a Caribbean flavour, its rigorous and clear presentation will appeal to students and teachers worldwide.

The African Journal of Finance and Management, 2016 *The Foundations of Econometric Analysis* David F. Hendry, Mary S. Morgan, 1995 In this compelling 1995 book, David Hendry and Mary Morgan bring together the classic papers of the pioneer econometricians. Together, these papers form the foundations of econometric thought. They are essential reading for anyone seeking to understand the aims, method, and methodology of econometrics and the development of this statistical approach in economics. However, because they are technically straightforward, the book is also accessible to students and non-specialists. An editorial commentary places the readings in their historical context and indicates the continuing relevance of these early yet highly sophisticated works for current econometric analysis. While this book provides a companion volume to Mary Morgan's acclaimed *The History of Econometric Ideas*, the editors' commentary both adds to that earlier volume and also provides a stand-alone and synthetic account of the development of econometrics.
