AI Agents vs. AI Chatbots: A Strategic Guide for B2B Customer Service Branislav Bozanic, 2025-04-01 In 2021 Uber was expanding at a staggering rate but growth came at a cost After pandemic related restrictions eased the multinational

American transportation company faced severe driver shortages and regulatory hurdles that slowed the hiring of new drivers. Wait times surged, prices fluctuated, and customer frustration grew. One of the biggest bottlenecks was due to customer support. The high volume of tickets coming in across multiple channels required manual processing. And therein lay their problem. Even Uber couldn't keep up with all the customer support demands. This resulted in slow response times, inconsistent resolutions, and high operational costs. However, their team didn't panic. There was an obvious solution: AI-driven technologies. More precisely, an AI-powered robotic process automation (RPA) system. Uber quickly implemented RPA to categorize tickets and handle repetitive and time-consuming customer support tasks. The results? Processing time for common issues dropped from days to minutes. Customer satisfaction skyrocketed with faster response times. Cost savings were massive, with the company revenue growing from 17 to 32 billion US dollars the following year.

Curious to know which one is the all-around solution that is more suitable for the B2B ecosystem? This ebook aims to demystify the differences between AI Agents and AI Chatbots, provide their respective benefits, and help businesses make the right choice according to their unique customer service requirements.
