Representations Of Vision Trends And Tacit Assumptions In Vision Research:

Representations of Vision Andrei Gorea, 1991-04-26 This stimulating volume on vision extends well beyond the traditional areas of vision research and places the subject in a much broader philosophical context The emphasis throughout is to integrate and illuminate the visual process The first three parts of the volume provide authoritative overviews on computational vision and neural networks on the neurophysiology of visual cortex processing and on eye movement research Each of these parts illustrates how different research perspectives may jointly solve fundamental problems related to the efficiency of visual perception to the relationship between vision and eye movements and to the neurophysiological codes underlying our visual perceptions In the fourth part leading vision scientists introduce the reader to some major philosophical problems in vision research such as the nature of ultimate codes for perceptual events the duality of psychophysics the bases of visual recognition and the paradigmatic foundations of computer vision research **The Oxford Handbook of Perceptual Organization** Johan Wagemans, 2015 Perceptual organization comprises a wide range of processes such as perceptual grouping figure ground organization filling in completion and perceptual switching The Oxford Handbook of Perceptual Organization provides a broad and extensive review of the current literature written in an accessible form for scholars and students Neuroscience and Philosophy Maxwell Bennett, Daniel Dennett, Peter Hacker, John Searle, 2009-04-22 Philosophy *What is Cognitive Science?* Ernest Lepore, Zenon Pylyshyn, 1999-10-18 Written by an assembly of leading researchers in the field this volume provides an innovative and non technical introduction to cognitive science and the key issues that animate the field Philosophical Foundations of Neuroscience M. Toward a New Behaviorism William R. Uttal, 1998 This volume examines the scientific basis of reductionist approaches to understanding visual perception The author makes the provocative argument that contemporary neuroscience and cognitive science have gone off on a wild goose chase in the search for reductionist explanations of perceptual phenomena This book considers some specific and general examples of this misdirection and suggests an alternative future course for science It reviews the successes and failures of the sciences efforts to explain perceptual and other mental functions in the terms of either internal cognitive mechanisms formal models or the neural structures from which the brain the organ of the mind is constructed Although this is an iconoclastic and minority view the book shows how many contemporary perceptual scientists have qualified their thinking with regard to what their data and theories mean even while generally accepting the empirical findings It is without question an attempted refutation of some of the primary assumptions of contemporary theory Summing up the author s convictions concerning some of the most important questions of human nature this book is a statement of a point of view that has provided a framework for his personal answers to some of these important questions of human history
