Research In Computer And Robot Vision:

Research In Computer And Robot Vision Colin Archibald, Paul Kwok, Ulrich Gabbert, 1995-02-28 Research in Computer and Robot Vision is directed toward researchers and graduate students in the field of computer vision. A broad spectrum of recent research is presented including sensing and navigation for mobile robots, the extraction of lines, curves, surfaces, and skeletons from intensity images and range images, human motion and feature extraction. Three applied research projects are presented on the topics of handwriting recognition, automatic understanding of technical drawings, and the collection and interpretation of 3-D images for use in dentistry. These papers dramatically illustrate the breadth of implications of the use of computer vision in industrial, social, and even medical arenas. *Computer Vision and Sensor-Based Robots* C.H. Dodd, 2012-12-06 The goal of the symposium Computer Vision and Sensor Based Robots held at the General Motors Research Laboratories on September 25 and 26 1978 was to stimulate a closer interaction between people working in diverse areas and to discuss fundamental issues related to vision and robotics. This book contains the papers and general discussions of that symposium, the 22nd in an annual series covering different technical disciplines that are timely and of interest to General Motors as well as the technical community at large. The subject of this symposium remains timely because the cost of computer vision hardware continues to drop and there is increasing use of robots in manufacturing applications. Current industrial applications of computer vision range from simple systems that measure or compare to sophisticated systems for part location determination and inspection. Almost all industrial robots today work with known parts in known positions and we are just now beginning to see the emergence of programmable automation in which the robot can react to its environment when stimulated by visual and force touch sensor inputs. As discussed in the symposium, future advances will depend largely on research now underway in several key areas. Development of vision systems that can meet industrial speed and resolution requirements with a sense of depth and color is a necessary step. Unifying Perspectives in Computational and Robot Vision Danica Kragic, Ville Kyrki, 2008-06-06 Assembled in this volume is a collection of some of the state-of-the-art methods that are using computer vision and machine learning techniques as applied in robotic applications. Currently, there is a gap between research conducted in the computer vision and robotics communities. This volume discusses contrasting viewpoints of computer vision vs. robotics and provides current and future challenges discussed from a research perspective. **Unifying Perspectives in Computational and Robot Vision** Danica Kragic, Ville Kyrki, 2008-11-01 Assembled in this volume is a collection of some of the state-of-the-art methods that are using computer vision and machine learning techniques as applied in robotic applications. systems consist of object or scene recognition vision based motion control vision based mapping and dense range sensing and are used for identification and navigation As these computer vision and robotic connections continue to develop the benefits of vision technology including savings improved quality reliability safety and productivity are revealed Robotic Vision Technologies for Machine Learning and Vision Applications is a comprehensive collection which highlights a solid framework for understanding existing work and planning future research This book includes current research on the fields of robotics machine vision image processing and pattern recognition that is important to applying machine vision methods in the real world

Robot Vision Ales Ude,2010-03-01 The purpose of robot vision is to enable robots to perceive the external world in order to perform a large range of tasks such as navigation visual servoing for object tracking and manipulation object recognition and categorization surveillance and higher level decision making Among different perceptual modalities vision is arguably the most important one It is therefore an essential building block of a cognitive robot This book presents a snapshot of the wide variety of work in robot vision that is currently going on in different parts of the world

Robot Vision A. Pugh,2013-06-29 Over the past five years robot vision has emerged as a subject area with its own identity A text based on the proceedings of the Symposium on Computer Vision and Sensor based Robots held at the General Motors Research Laboratories Warren Michigan in 1978 was published by Plenum Press in 1979 This book edited by George G Dodd and Lothar Rosso probably represented the first identifiable book covering some aspects of robot vision The subject of robot vision and sensory controls RoViSeC occupied an entire international conference held in the Hilton Hotel in Stratford England in May 1981 This was followed by a second RoViSeC held in Stuttgart Germany in November 1982 The large attendance at the Stratford conference and the obvious interest in the subject of robot vision at international robot meetings provides the stimulus for this current collection of papers Users and researchers entering the field of robot vision for the first time will encounter a bewildering array of publications on all aspects of computer vision of which robot vision forms a part It is the grey area dividing the different aspects of computer vision which is not easy to identify Even those involved in research sometimes find difficulty in separating the essential differences between vision for automated inspection and vision for robot applications Both of these are to some extent applications of pattern recognition with the underlying philosophy of each defining the techniques used
