Requiem For Nature:

Requiem for Nature John Terborgh, 2004-07-09 For ecologist John Terborgh Manu National Park in the rainforest of Peru is a second home he has spent half of each of the past twenty five years there conducting research Like all parks Manu is assumed to provide inviolate protection to nature Yet even there in one of the most remote corners of the planet Terborgh has been witness to the relentless onslaught of civilization Seeing the steady destruction of irreplaceable habitat has been a startling and disturbing experience for Terborgh one that has raised urgent questions Is enough being done to protect nature Are current conservation efforts succeeding What could be done differently What should be done differently In *Requiem for Nature* he offers brutally honest answers to those difficult questions and appraises the prospects for the future of tropical conservation His book is a clarion call for anyone who cares about the quality of the natural world we will leave our children Terborgh examines current conservation strategies and considers the shortcomings of parks and protected areas both from ecological and institutional perspectives He explains how seemingly pristine environments can gradually degrade and describes the difficult social context a debilitating combination of poverty corruption abuses of power political instability and a frenzied scramble for quick riches in which tropical conservation must take place He considers the significant challenges facing existing parks and examines problems inherent in alternative approaches such as ecotourism the exploitation of nontimber forest products sustainable use and sustainable development Throughout Terborgh argues that the greatest challenges of conservation are not scientific but are social economic and political and that success will require simultaneous progress on all fronts He makes a compelling case that nature can be saved but only if good science and strong institutions can be thoughtfully combined

Against Extinction William Mark Adams, 2013 Conservation in the 21st century needs to be different and this book is a good indicator of why Bulletin of British Ecological Society Against Extinction tells the history of wildlife conservation from its roots in the 19th century through the foundation of the Society for the Preservation of the Wild Fauna of the Empire in London in 1903 to the huge and diverse international movement of the present day It vividly portrays conservation's legacy of big game hunting the battles for the establishment of national parks the global importance of species conservation and debates over the sustainable use of and trade in wildlife Bill Adams addresses the big questions and ideas that have driven conservation for the last 100 years How can the diversity of life be maintained as human demands on the Earth expand seemingly without limit How can preservation be reconciled with human rights and the development needs of the poor Is conservation something that can be imposed by a knowledgeable elite or is it something that should emerge naturally from people's free choices These have never been easy questions and they are as important in the 21st century as at any time in the past The author takes us on a lively historical journey in search of the answers

Conservancy Richard Brewer,2013-06-03 Land trusts or conservancies protect land by owning it Although many people are aware of a few large land trusts The Nature Conservancy and the Trust for Public Land for instance there are now close to 1 300 local trusts with more coming into being each month American land trusts are diverse shaped by their missions and adapted to their local environments Nonetheless all land trusts are private non profit organizations for which the acquisition and protection of land by direct action is the primary or sole mission Nonconfrontational and apolitical land trusts work with willing land owners in voluntary transactions Although land trusts are the fastest growing and most vital part of the land conservation movement today this model of saving land by private action has become dominant only in the past two decades Brewer tells why the advocacy model in which private groups try to protect land by promoting government purchase or regulation in the 1980s was eclipsed by the burgeoning land trust movement He gives the public a much needed primer on what land trusts are what they do how they are related to one another and to other elements of the conservation and environmental movements and their importance to conservation in the coming decades As Brewer points out unlike other land saving measures land trust accomplishments are permanent At the end of a cooperative process between a landowner and the local land trust the land is saved in perpetuity Brewer s book the first comprehensive treatment of land trusts combines a historical overview of the movement with more specific information on the different kinds of land trusts that exist and the problems they face The volume also offers a how to approach for persons and institutions interested in donating selling or buying land discusses four major national land trusts The Nature Conservancy Trust for Public Land American Farmland Trust and Rails to Trails Conservancy and gives a generous sampling of information about the activities and accomplishments of smaller local trusts nationwide Throughout the book is enriched by historical narrative analysis of successful land trusts and information on the how and why of protecting land as well as Brewer s intimate knowledge of ecological systems biodiversity and the interconnectedness of human and non human life forms Conservancy is a must read volume for people interested in land conservation including land trust members volunteers and supporters as well as anyone concerned about land use and the environment
