Primate Nervous System:

The Primate Nervous System, Part II T. Hokfelt, A. Bjorklund, Floyd E. Bloom, 1998-09-17 This volume is the second in the planned coverage of the neurochemical circuitry of the primate central nervous system While this volume contains only two chapters their topics and the extraordinarily comprehensive coverage with which the authors have dealt with their topics will nevertheless contribute equal amounts of knowledge wisdom and opportunities for future research extensions as have every volume in this unique series As such these chapters extend the goals of this primate series to develop a broad coverage of human and non human primate chemical neuroanatomic details in a volume which makes clear the known and desirable appreciation for differences between and among subsets of primate brains The first chapter covers the primate thalamus with equal emphases on new world old world pro simian and human anatomic details and their differences The second undertakes a comparably comprehensive examination of one of the most intensively studied regions of the primate brain namely the primate visual cortex While much has been studied both chapters also reveal how much remains for future efforts in these enormously important regions which are the archetypes of primate sub cortical and cortical function

The Primate Nervous System, Part I Floyd E. Bloom, A. Bjorklund, T. Hokfelt, 1997-05-07 This volume is a new timely and fitting extension to the Handbook of Chemical Neuroanatomy focussing on the neurochemical circuitry of the primate brain The book will compliment the growing efforts to apply the analytical strategies of chemical neuroanatomy to the primate brain The goal of this volume is to develop a broad based coverage of human and non human primate chemical neuroanatomic details together within a volume in which details on transmitters and systems can be appreciated The eight comprehensive chapters that comprise this volume deal with large global concepts and datasets which not only create an initial coverage of the entire primate neuraxis but also capture useful points of information on the chemical neuroanatomy of the primate nervous system An excellent informative book and a welcome addition to the sparse literature in this field
